1. Introduction

1.1 Terms and definitions

The following terms are reserved words defined in ISO 20022 Edition 2013 – Part1. When used in this document, they will be in italic and follow the *UpperCamelCase* notation.

Term	Definition
BusinessRole	functional role played by a business actor in a particular *BusinessProcess* or *BusinessTransaction*
Participant	involvement of a BusinessRole in a BusinessTransaction
BusinessProcess	unrealized definition of the business activities undertaken by *BusinessRoles* within a *BusinessArea* whereby each *BusinessProcess* fulfils one type of business activity and whereby a *BusinessProcess* may include and extend other *BusinessProcesses*
BusinessTransaction	particular solution that meets the communication requirements and the interaction requirements of a particular *BusinessProcess* and *BusinessArea*
MessageDefinition	formal description of the structure of a message instance

1.2 Glossary

Acronyms

Acronym	Definition
MDR	Message Definition Report
MCR	Message change request
SEG	Standards Evaluation Group
FI	Financial Institution
XML	eXtensible Mark-up Language
IBAN	International Bank Account Number
BIC	Business Identifier Code
ACH	Automated Clearing House
DD	Direct Debit
RTGS	Real time gross settlement
MRI	Mandate Related Information

Abbreviations

Abbreviation	Definition
e.g.	**For example (exempli gratia)**
etc.	**Etcetera**
i.e.	**That is (id est)**

1.3 Document Scope and Objectives

This document is the first part of the ISO 20022 Message Definition Report (MDR) that describes the *BusinessTransactions* and underlying message set. For the sake of completeness, the document may also describe *BusinessActivities* that are not in the scope of the project.

This document sets:

- The *BusinessProcess* scope (business processes addressed or impacted by the project)
- The BusinessRoles involved in these BusinessProcesses

The main objectives of this document are:

- To explain what BusinessProcesses and BusinessActivities these MessageDefinitions have addressed
- To give a high level description of *BusinessProcesses* and the associated *BusinessRoles*
- To document the *BusinessTransactions* and their *Participants* (sequence diagrams)
- To list the MessageDefinitions
- To provide business examples

2. Scope and Functionality

2.1 Background

This Message Definition Report covers a set of 6 ISO 20022 *MessageDefinitions* developed by SWIFT and approved by the Payments Standards Evaluation Group (SEG) on 28 January 2013. These messages are specifically designed to support the clearing and settlement of credit transfers, direct debits and reversals directly between banks or across an automated clearing house (ACH) and real time gross settlement systems (RTGS). On top of that the status reporting of these messages has been included.

2.2 Scope

Set of messages used between financial institutions for the clearing and settlement of payment transactions.

2.3 Groups of *MessageDefinitions* and Functionality

- Instruction messages
  - The FinancialInstitutionToFinancialInstitutionCustomerCreditTransfer message: used to move funds from a debtor account to a creditor;
  - The FinancialInstitutionToFinancialInstitutionCustomerDirectDebit message: used to collect funds from a debtor account for a creditor;
  - The FinancialInstitutionCreditTransfer message: used to move funds from a debtor account to a creditor, where both debtor and creditor are financial institutions.Related messages

- Related messages
  - The FinancialInstitutionToFinancialInstitutionPaymentReversal message: used to reverse a payment previously executed;
  - The PaymentReturn message: used to undo a payment previously settled;
  - The FinancialInstitutionToFinancialInstitutionPaymentStatusReport message: used to inform on the positive or negative status of an instruction (either single or file) and to report on a pending instruction.

.

3. BusinessRoles and Participants

A *BusinessRole* represents an entity (or a class of entities) of the real world, physical or legal, a person, a group of persons, a corporation. Examples of *BusinessRoles*: “Financial Institution”, “ACH”, “CSD”.

A *Participant* is a functional role performed by a *BusinessRole* in a particular *BusinessProcess* or *BusinessTransaction*: for example the “user” of a system, “debtor”, “creditor”, “investor” etc.

The relationship between *BusinessRoles* and *Participants* is many-to-many. One *BusinessRole* (that is, a person) can be involved as different *Participants* at different moments in time or at the same time: "user", "debtor”, "creditor", "investor", etc. Different *BusinessRoles* can be involved as the same *Participant*.

Participants and BusinessRoles definitions	
Description	Definition
Participants	
Debtor	The party that owes an amount of money to the (ultimate) creditor. In the context of the payment model, the debtor is also the debit account owner.
Creditor	Party to which an amount of money is due. In the context of the payment model, the creditor is also the credit account owner.
UltimateDebtor	The ultimate party that owes an amount of money to the (ultimate) creditor.
UltimateCreditor	The ultimate party to which an amount of money is due.
DebtorAgent	Financial Institution servicing an account for the debtor.
CreditorAgent	Financial Institution servicing an account for the creditor.
ForwardingAgent	Financial institution that receives the instruction from the initiating party and forwards it to the next agent in the payment chain for execution.
InitiatingParty	Party initiating the payment to an agent. In the payment context, this can either be the debtor (in a credit transfer), the creditor (in a direct debit), or a party that initiates the payment on behalf of the debtor or creditor.
Account Owner	Party that legally owns the account.
Account Servicer	Party that manages the account on behalf of the account owner, that is manages the registration and booking of entries on the account, calculates balances on the account and provides information about the account.
PaymentClearingAgent (=InstructingAgent)	An agent that instructs the next party in the payment chain to carry out the payment/instruction.
PaymentSettlementAgent (=InstructedAgent)	An agent that executes the instruction upon the request of the previous party in the chain (either an agreement party, or a clearing agent).
IntermediaryAgent	Financial Institution that receives a financing request from the Financing Requestor and forwards it to the First Agent for execution.
BusinessRoles	
Financial Institution	Organisation established primarily to provide financial services.
Clearing System	Specifies the system which plays a role in the clearing process.
Party	Entity involved in a payment.

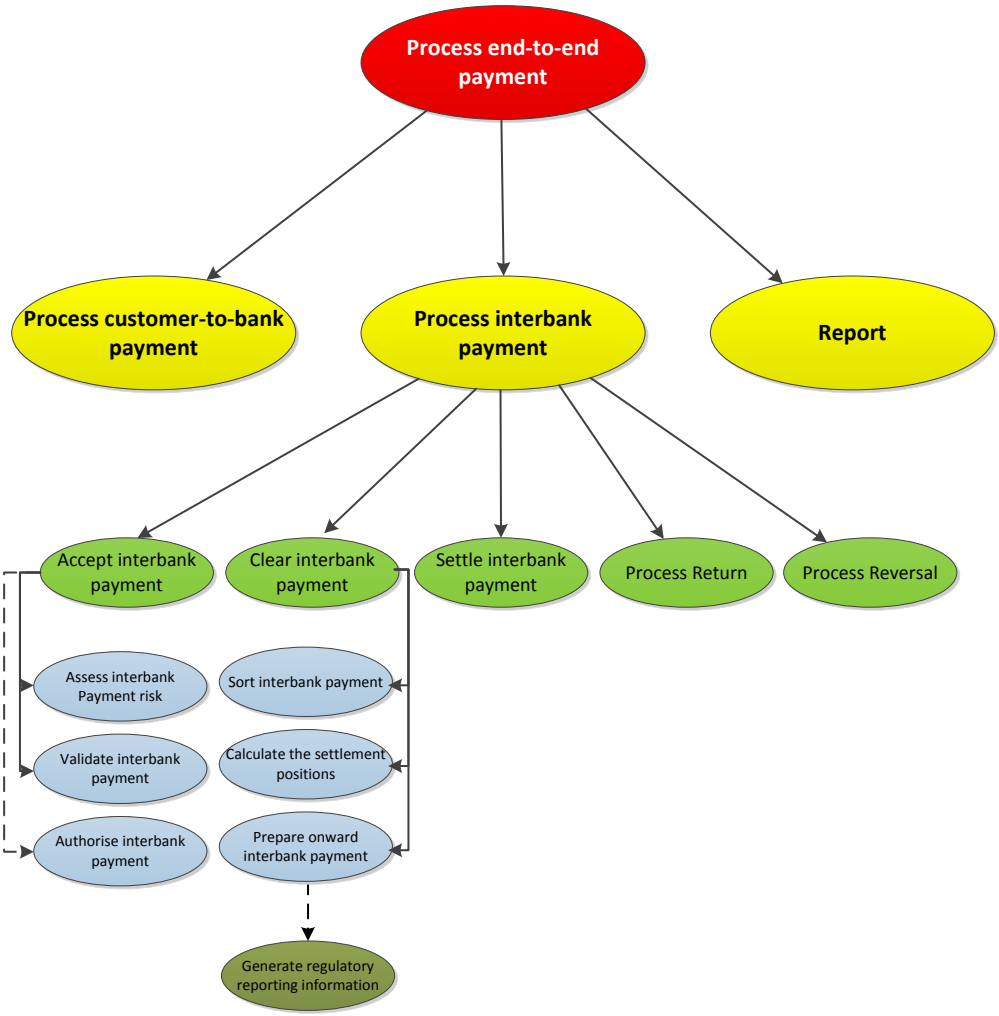
4. BusinessProcess Description

4.1 *BusinessProcess* Diagram – Credit Transfer

This diagram pictures the high level end-to-end payments *BusinessProcesses*. The first drill down includes the process interbank payment, which is covered by this document. The aim of the below is to describe the high-level scope of the project, not to be exhaustive.



Accept interbank payment

- Definition: The payment acceptation includes the check of the validation of the payment and the payment risk assessment.
- Pre-condition: the clearing agent has received the payment order.

- Trigger: receipt of the payment order.
- Post-conditions: the payment has been accepted or rejected.

Assess interbank payment risk:

- Definition: settlement agent undertakes the necessary risk checks in order to process the payment further, for examples: embargo, sufficient credit, cover received, system limits.
- Pre-condition: the settlement agent has received the payment order
- Trigger: receipt of the payment order.
- Post-conditions: the payment has been accepted or rejected.

Validate interbank payment

- Definition: the clearing agent undertakes the necessary content checks in order to process the payment further. For examples: authenticate the remitting party, validate syntax, confirm the SLA's.
- Trigger: receipt of the payment order.
- Pre-conditions: the clearing agent has received the payment order
- Post-conditions: payment has been accepted or rejected. If accepted, the instructed payment is ready for the risk assessment or is executable

Authorise interbank payment

- Definition: the authorisation of a payment order by the PaymentCleraingAgent. This is an extension of the sub-process of the 'Accept Interbank Payment' process.
- An authorisation may be implicit if the system where the payment is generated has been approved to generate payments, as the preceding procedures are deemed satisfactory secure. The system will then generate a digital signature without manual intervention.
- An authorisation may be explicit, if procedures require human approval.
- Trigger: a payment order has been created.
- Pre-conditions: the accept payment process has completed and waits for authorisation if required by the PaymentClearingAgent.
- Post-conditions: the payment order is authorised.

Clear interbank payment

- Definition: preparation of the payment information by the payment clearing agent for the next clearing agent in the interbank chain. This process of preparing payment information can be divided into the sub-processes 'Sort payment' and 'prepare onward interbank payment'.
- Trigger: payment execution date is reached.
- Pre-conditions: the payment is accepted
- Post-conditions: the onward interbank payment is prepared

Sort interbank payment

- Definition: the clearing agent determines the next clearing agent or creditor/debtor for the payment. The clearing agent identification is done by the previous party or selected by the current agent (tables). The last clearing agent is determined by the creditor/debtor's account servicer.
- Trigger: the payment must be instructed to the next party
- Pre-conditions: the payment is accepted
- Post-conditions: next clearing agent is determined

Calculate the settlement positions

- Definition: the clearing agent applies the payment amount to the debit party and credit party's clearing positions. For multiple payments, it is equivalent to calculate the sub-settlement positions. The calculation may be done continuously or at certain times through a bilateral netting. The settlement may be delegated to a third party.
- Trigger: payment has been accepted.
- Pre-conditions: the payment is executable.
- Post-conditions: payment amount is applied to the debit and credit party.

Prepare onward interbank payment

- Definition: the clearing agent collects the information necessary to remit the payment to the next party (clearing and/or settlement agent). Then the clearing agent remits the payment to the party.
- Trigger: the payment must be instructed to the next party
- Pre-condition: the money has been received
- Post-conditions: the onward payment is ready

Settle interbank payment

- Definition: the settlement agent performs the transfer of cash between the debit party and the credit party
- Trigger: payment execution date in the payment is reached
- Pre-condition: instructed payment is executable (all information is there to process the payment and the payment validity has been checked) and the settlement agent is identified by the clearing agent
- Post-conditions: transfer of ownership is performed between the debit party and credit party.

Process return

- Definition: Returns are individual debits that have reached the Creditor's Agent and have been settled at the inter-bank level, but the Creditor's Agent is then unable to apply the credit for one of a number of reasons e.g. account closed, no funds, customer dead, etc.
- Following that instruction the Creditor's account is credited by his bank and the credit is returned electronically through the clearing process to the Debtor's Agent.
- Trigger: Return of a Credit Transfer
- Pre-condition: Settled Credit Transfer instruction subject for return
- Post-condition: Returned Credit Transfer instruction issued

Process reversal

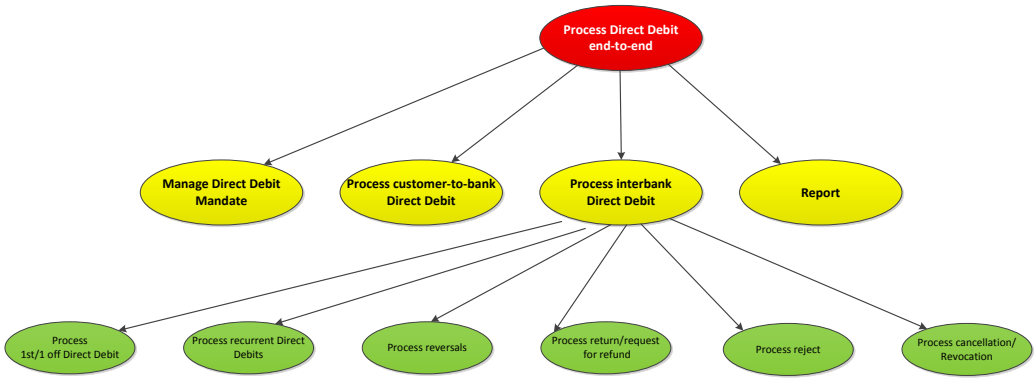
- Definition: The Credit Transfer reversal will contain sufficient information which allows the Creditor's Agent to identify it as a 'Reversal' of a particular Credit Transfer incorrectly issued for a number of reasons e.g. duplicate payments, incorrect file sent, etc.
- Following that instruction the Creditor's account is credited by his bank and the credit is returned electronically through the clearing process to the Debtor's Agent.
- Trigger: Accounting and reporting of the Credit Transfer Reversal instruction
- Pre-condition: Credit Transfer Reversal received and successfully validated
- Post-condition: Reversed Direct Debit Instruction

Generate regulatory reporting information

- Definition: the forwarding or Debtor agent selects the information from the payment transaction necessary to meet regulatory reporting requirements, if necessary (eg balance of payments reporting, reporting on money-laundering issues,…)
- Trigger: the payment meets the regulatory reporting criteria.
- Pre-condition: there are regulatory reporting requirements.
- Post-conditions: the information for the regulatory reporting has been extracted based on information in the payment.

4.2 *BusinessProcess* Diagram – Direct Debit

This diagram pictures the high level *BusinessProcesses* covered by this project. The aim of the below is to describe the high-level scope of the project, not to be exhaustive.



Process Direct Debit

- Definition: The Creditor's Agent sends the message to the clearing system in line with the clearing cycle.
- The clearing system forwards the message to the Debtor's Agent immediately for information purposes only and processes the Direct Debit in accordance with the settlement cycle, to initiate the debit to the Debtor's account
- Trigger: Release of Direct Debit instructions to the Instructed Agent
- Pre-condition: Direct Debit instructions received and successfully validated
- Post-condition: Forwarded Direct Debit instructions
- Role: Financial institution / Clearing system

Process reject

- Definition: Reconciles reject with the original Direct Debit instructions and identifies the reason for rejection. If the reject results from a formatting error, correct the data and resubmit for processing
- Trigger: Reconciliation of the Reject
- Pre-condition: Reject received
- Post-condition: Reconciled reject

Process return/request for refund

- Definition: Returns are individual debits that have reached the Debtor's Agent and have been settled at the inter-bank level, but the Debtor's Agent is then unable to make the collection for one of a number of reasons e.g. account closed, no funds, customer dead, etc.
- The Debtor has the unconditional right during "n" days after a debit to instruct its bank to revoke the debit. Following that instruction the Debtor's account is credited by his bank and the debit is returned electronically through the clearing process to the Creditor's Agent.
- Trigger: Return of a Direct Debit / Request for refund
- Pre-condition: Settled Direct Debit instruction subject for return / refund
- Post-condition: Returned Direct Debit instruction / Requested Refund

Process reversal

- Definition: The Direct Debit reversal will contain sufficient information which allows the Debtor's Agent to identify it as a 'Reversal' of a particular Direct Debit. Debtor's Agent will credit Debtor's account under quotation of the original Direct Debit reference and the reason for reversal.
- Trigger: Accounting and reporting of the Direct Debit Reversal instruction
- Pre-condition: Direct Debit Reversal received and successfully validated
- Post-condition: Reversed Direct Debit Instruction

Note: the process cancellation/revocation is out of scope.

5. Description of BusinessActivities

This section presents the different *BusinessActivities* within each *BusinessProcess*. *BusinessActivities* of a process are described in swim lane diagrams and are referred in this document as activity diagrams.

The development of an activity diagram is part of the ISO 20022 modelling process and allows capturing the requirements.

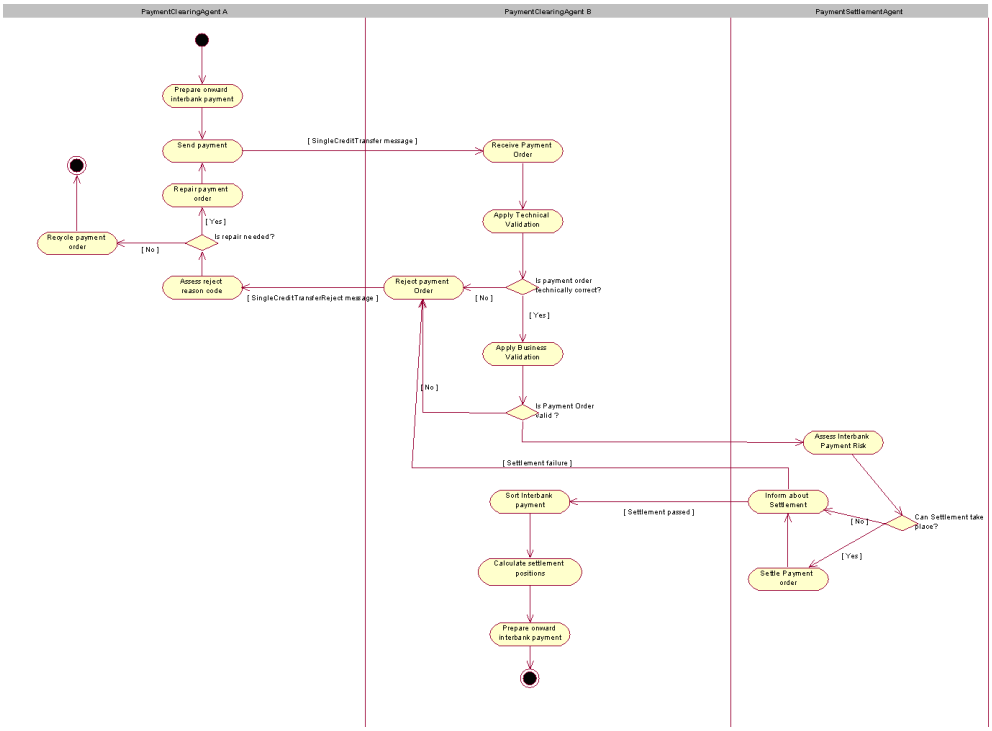
The activity diagram provides a zoom-in on the *BusinessActivities* taking place during each of the *BusinessProcesses* described in Section 4. It also shows the *BusinessActivities* that are triggered when another *BusinessAtivity* has a negative result.

What is the activity diagram about?

- It is a diagram representing the 'common lifecycle' of a *BusinessProcess*
- A start point ● shows where the lifecycle of the business process commences and the end points show ◉ where the lifecycle may possibly end
- A lozenge ◇ means a that a choice between several actions can be made
- A bar ▬ means a that several actions are initiated in parallel
- The flow of activities between the involved *Participants* (parties)
- *BusinessActivities* may result in different actions, that is, information is conveyed from one party to another party.

Both in scope and out of scope activities are included, with a different level of details. There are no information requirements for out of scope activities, except that they should be clearly identified in the diagram.

5.1 *BusinessActivity* – Credit Transfer

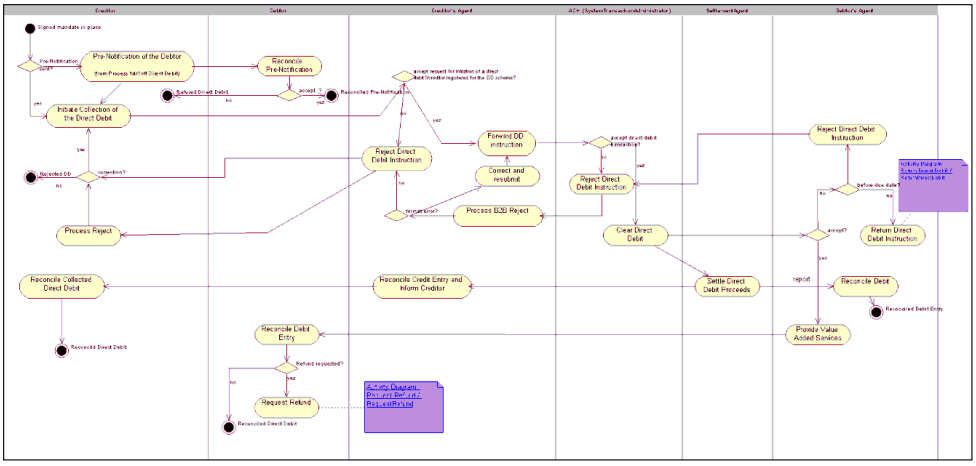


The Agents in this activity diagram are called PaymentClearingAgent and PaymentSettlementAgent in generic terms, in more concrete examples, these will be replaced by the most relevant agents (Debtor Agent, Creditor Agent, Intermediary Agent, …)

Descriptions of the *BusinessActivities*	
	Initiator
Prepare onward interbank payment: The PaymentClearingAgent prepares the outgoing payment instruction and selects the next PaymentClearingAgent and/or the clearing channel through which the payment instruction will be cleared and/or settled.	PaymentClearingAgent A
Send payment: The PaymentClearingagent sends out the payment instruction to the selected channel/PaymentClearingAgent.	PaymentClearingAgent A
Assess reject reason code: The PaymentClearingAgent assesses the reject reason code provided by the rejecting PaymentClearingAgent	PaymentClearingAgent A
Repair payment order: The PaymentClearingAgent reformats/supplements the original payment order for re-submission to the appropriate clearing channel/PaymentClearingAgent.	PaymentClearingAgent A
Recycle payment order: The PaymentClearingAgent recycles the rejected payment order. Recycling can be by downgrading the STP level under which the payment order can be cleared and settled, or selecting another channel for clearing and settling the payment.	PaymentClearingAgent A
Receive Payment Order: The PaymentClearingAgent acknowledges receipt of the payment order (technical) and proceeds to next step.	PaymentClearingAgent B
Apply Technical Validation: The PaymentClearingAgent applies techncial validation on the payment order. Techncial validation may comprise syntactic validation (conformance of the payment order with its technical definition), semantical validation (message, through to o technical content consistency	PaymentClearingAgent B
Apply Business Validation	PaymentClearingAgent B
Reject payment Order: The PaymentClearingAgent rejects the payment order to the preceding PaymentClearingAgent and appends a relevant reject reason code explaining the reason for the reject.	PaymentClearingAgent B
Sort Interbank payment	PaymentClearingAgent B
Calculate settlement positions	PaymentClearingAgent B
Prepare onward interbank payment: The PaymentClearingAgent prepares the outgoing payment instruction and selects the next PaymentClearingAgent and/or the clearing channel through which the payment instruction will be cleared and/or settled.	PaymentClearingAgent B
Assess Interbank Payment Risk	PaymentSettlementAgent

Descriptions of the *BusinessActivities*	
	Initiator
Settle Payment order	PaymentSettlementAgent
Inform about Settlement	PaymentSettlementAgent

5.2 BusinessActivity– Direct Debit



Return direct debit:

Clear Direct Debit Return
Reconciled Direct Debit
Reconcile Debit Entry
Settle Direct Debit Return Proceeds
Reconcile Credit Entry
Inform Debtor
Reconcile Credit Entry
Reconciled Credit Entry

6. BusinessTransactions

This section describes the message flows based on the activity diagrams documented above. It shows the typical exchanges of information in the context of a *BusinessTransaction*.

6.1 FIToFI Customer Credit Transfer *BusinessTransaction*

An FIToFICustomerCreditTransfer message is the inter-bank movement of an amount from a party bank account (the Debtor) to a beneficiary party (the Creditor).

FIToFICustomerCreditTransfer messages result in one or more cash transfers between Debtors and Creditors through correspondent banks or infrastructures. They may be exchanged as single or grouped instructions following certain common characteristics and, for convenience or efficiency reasons, exchanged in a batch mode. The processing of credit transfers may differ from country to country and system to system.

Depending on the scenario, there might be an agent between the Debtor Agent and the Creditor Agent. This agent can be an Intermediary Agent or a Reimbursement Agent. The narrative will describe more in detail the agent role.

In scenarios where the receiving agent services an account for the sending agent, the scenario also includes the case where the sending agent has an account with a branch/head office of the receiving agent and will indicate that the receiving agent can reimburse himself at this institution. The sending agent has to be aware of an intra-group agreement allowing this.

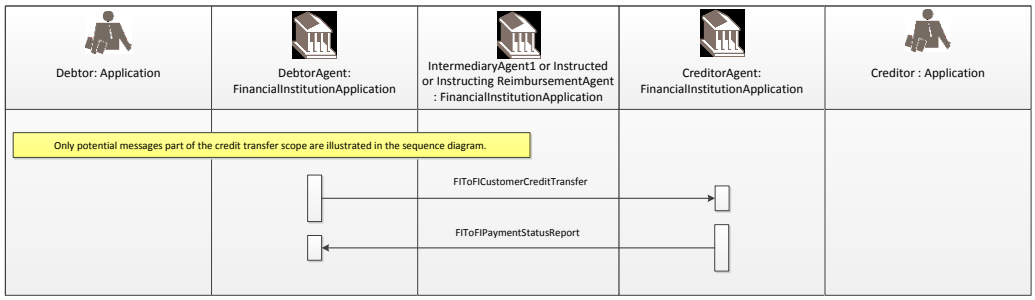
A payment clearing and settlement system could occur between Debtor Agent and Creditor Agent (or between any other agents). The clearing process where the Clearing Agent after being informed on the transaction prepares and sends the payment information to the Settlement Agent (if different) is out of scope and will not be described. This process includes the calculation of the settlement positions and transmission of files to the Settlement Agent. The Settlement Agent transfers the funds from the Debtor Agent to the Creditor Agent in accordance with the settlement cycle and based on the settlement report provided by the Clearing Agent.

Only potential messages of the Credit Transfer project scope are illustrated in the sequence diagrams. The original contracts between the Debtor and the Creditor (for example order and invoice) and the

CustomerCreditTransferInitiation message by the Debtor are out of scope and are therefore not included in the diagram.

Scenario A:

The Debtor Agent and the Creditor Agent are correspondents in the currency of the transaction.



The scenario caters for the Debtor Agent servicing an account for the Creditor Agent and vice versa. It also covers the case where Debtor Agent and Creditor Agent are linked directly across a payment clearing and settlement system.

The On Us scenario where the Debtor Agent is also the Creditor Agent is out of scope.

In scope: The Debtor Agent sends the FIToFICustomerCreditTransfer message to the Creditor Agent.

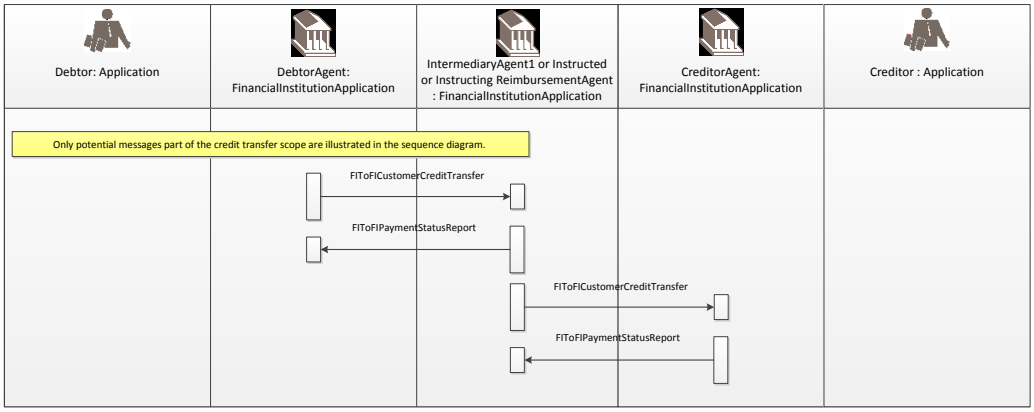
In scope: The Creditor Agent optionally confirms the processability of the FIToFICustomerCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor Agent.

Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or

BankToCustomerAccountReport/ BankToCustomerStatement message ('statement')).

Scenario B:

The Debtor Agent and the Creditor Agent are not correspondents: there is an Intermediary Agent between them (so-called 3-party serial payment)



The scenario also covers the payment clearing system case where the Agent between the Debtor Agent and the Creditor Agent is a Clearing and/or Settlement Agent.

For sake of simplicity, the scenario is limited to one Intermediary Agent between the Debtor Agent and the Creditor Agent.

In scope: The Debtor Agent sends the FIToFICustomerCreditTransfer message to the Intermediary Agent.

In scope: The Intermediary Agent **optionally** confirms the processability of the FIToFICustomerCreditTransfer by sending a positive FIToFIPaymentStatusReport message to the Debtor Agent.

In scope: The Intermediary Agent forwards the FIToFICustomerCreditTransfer message to the Creditor Agent.

In scope: The Creditor Agent **optionally** confirms the processability of the FIToFICustomerCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Intermediary Agent.

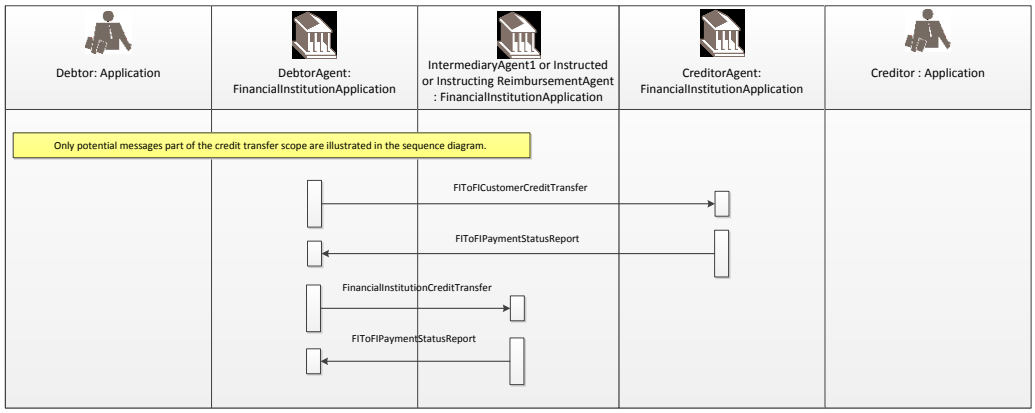
Out of scope: The Intermediary Agent may send a status update to the Debtor Agent.

Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or

BankToCustomerAccountReport/ BankToCustomerStatement message ('statement')).

Scenario C:

The Debtor Agent and the Creditor Agent are not correspondents in the currency of the transaction: there is a Reimbursement Agent between them (so-called 3-party cover payment)



For sake of simplicity, it is assumed that the Debtor Agent and the Creditor Agent have the same Reimbursement Agent. The FIToFICustomerCreditTransfer instruction will be covered through a separate FinancialInstitutionCreditTransfer message sent to the Reimbursement Agent (illustrated under the FinancialInstitutionCreditTransfer section).

In scope: The Debtor Agent sends the FIToFICustomerCreditTransfer message to the Creditor Agent.

In scope: The Creditor Agent optionally confirms the processability of the FIToFICustomerCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor Agent.

In scope: The Debtor Agent sends a FinancialInstitutionCreditTransfer message to the Reimbursement Agent.

In scope: The Reimbursement Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer by sending a positive FItoFIPaymentStatusReport message to the Debtor Agent.

Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or

BankToCustomerAccountReport/ BankToCustomerStatement message ('statement')).

6.2 Negative FIToFIPaymentStatusReport with FIToFICustomerCreditTransfer *BusinessTransaction*

The negative FIToFIPaymentStatusReport message is used, point to point between two parties, to report about the negative processability of an instruction, i.e. to report about the rejection of the instruction, and is used to:

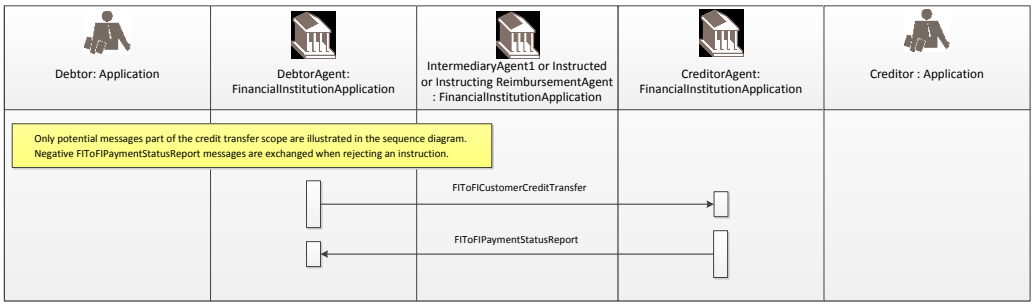
- Reject an FIToFICustomerCreditTransfer
- Reject a FinancialInstitutionCreditTransfer

The negative FIToFIPaymentStatusReport message is sent before Settlement.

After Settlement, the correct message to be used is the PaymentReturn message, the BankToCustomerDebitCreditNotification message ('notification') and/or the BankToCustomerAccountReport/ BankToCustomerStatement message ('statement'). Different options are illustrated in the sequence diagram.

Scenario A:

Debtor Agent and Creditor Agent are direct correspondents.



The scenario covers the case where the Creditor Agent (or a branch/head office of the Creditor Agent) services an account for the Debtor Agent. In the cases where the Debtor Agent services an account for the Creditor Agent and in the case of clearing system payments, the Creditor Agent will inform about the non-processability by using a PaymentReturn message.

In scope: The Debtor Agent sends the FIToFICustomerCreditTransfer message to the Creditor Agent.

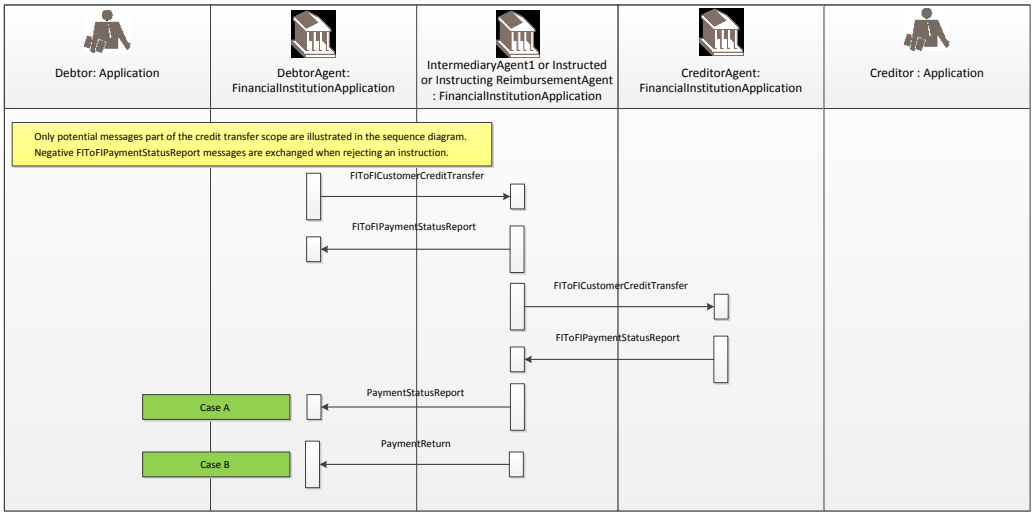
In scope: The Creditor Agent sends a negative FIToFIPaymentStatusReport message to inform the Debtor Agent about the non-processability of the FIToFICustomerCreditTransfer instruction (for example due to missing/incorrect information).

Note: whenever possible, the Debtor Agent might try to repair and re-submit the instruction. Depending on what has been agreed with the Debtor, the Debtor Agent may inform the Debtor of the repair with an updated FIToFIPaymentStatusReport message.

Scenario B:

Debtor Agent and Creditor Agent are not correspondents; there is an Intermediary Agent between them

(so-called 3-party Serial payment).



The scenario covers the case where the Creditor Agent (or branch/head office of Creditor Agent) services an account for the Intermediary Agent. In the cases where the Intermediary Agent services an account for the Creditor Agent or they are linked through a payment clearing system, the Creditor Agent will inform about the non-processability by using a PaymentReturn message.

In scope: The Debtor Agent sends the FIToFICustomerCreditTransfer message to the Intermediary Agent.

In scope: The Intermediary Agent **optionally** confirms the processability of the FIToFICustomerCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor Agent.

In scope: The Intermediary Agent forwards the FIToFICustomerCreditTransfer message to the Creditor Agent.

In scope: The Creditor Agent sends a negative FIToFIPaymentStatusReport message to inform the Intermediary Agent about the non-processability of the FIToFICustomerCreditTransfer instruction (for example due to missing/incorrect information).

Note: the Intermediary Agent might try to repair and re-submit the instruction when possible and inform the Debtor Agent with an updated FIToFIPaymentStatusReport accordingly.

CaseA: Intermediary Agent has not yet booked the instruction on the account of the Debtor Agent.

In scope: The Intermediary Agent forwards the negative FIToFIPaymentStatusReport message to inform the Debtor Agent about the non-processability of the FIToFICustomerCreditTransfer instruction.

Case B: Intermediary Agent has booked the instruction on the account of the Debtor Agent.

In scope: The Intermediary Agent sends a PaymentReturn message including the Return reason to the Debtor Agent to inform him about the non-processability of the FIToFICustomerCreditTransfer instruction.

Scenario C:

Debtor Agent and Creditor Agent are not correspondents in the currency of the transaction; there is a Reimbursement Agent between them (so-called 3-party cover payment). Rejection of the FinancialInstitutionCreditTransfer message.

Under this scenario, the Intermediary Agent between the Debtor Agent and Creditor Agent has to be seen as a

Reimbursement Agent.

For sake of simplicity, it is assumed that Debtor Agent and Creditor Agent have the same Reimbursement Agent. In scope: The Debtor Agent sends the FIToFICustomerCreditTransfer message to the Creditor Agent.

In scope: The Creditor Agent optionally confirms the processability of the FIToFICustomerCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor Agent.

In scope: The Debtor Agent sends a FinancialInstitutionCreditTransfer to the Reimbursement Agent.

In scope: The Reimbursement Agent sends a negative FIToFIPaymentStatusReport message to inform the Debtor Agent about the non-processability of the FinancialInstitutionCreditTransfer instruction (for example due to missing/ incorrect information).

In scope: The Debtor Agent repairs the cover FinancialInstitutionCreditTransfer instruction and re-sends it to the Reimbursement Agent.

In Scope: The Reimbursement Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor Agent.

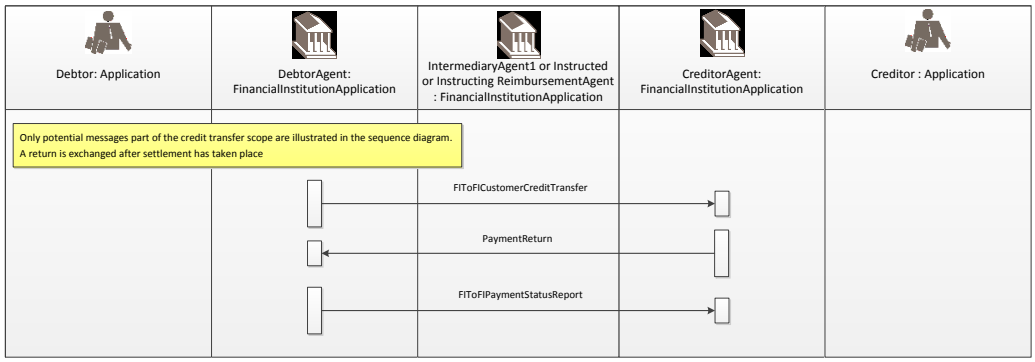
Note: If for whatever reason the FinancialInstitutionCreditTransfer can not be repaired and processed, the Debtor Agent will issue an FIToFIPaymentCancellationRequest message for the FIToFICustomerCreditTransfer message to the Creditor Agent.

6.3 PaymentReturn with FIToFICustomerCreditTransfer *BusinessTransaction*

The PaymentReturn message is sent by an Instructed Agent to the previous party in the payment chain when a payment cannot be executed due to an administrative reason (for example non existing/closed account) or banking reason (for example insufficient funds).

Scenario A:

The Debtor Agent and the Creditor Agent are correspondents.



The scenario covers for the case where the Debtor Agent services an account for the Creditor Agent and the case where Debtor Agent and Creditor Agent are linked through a payment clearing system.

Where the Creditor Agent services an account for the Debtor Agent, the Creditor Agent will inform about the non- processability of the instruction by using a negative FIToFIPaymentStatusReport (status Reject) message.

In scope: The Debtor Agent sends the FIToFICustomerCreditTransfer message to the Creditor Agent.

In scope: The Creditor Agent sends a PaymentReturn message to inform the Debtor Agent about the non-processability of the FIToFICustomerCreditTransfer instruction including the return reason (for example due to missing/incorrect information/closed account...).

In scope: The Debtor Agent optionally confirms the processability of the PaymentReturn message by sending a positive FIToFIPaymentStatusReport message to the Creditor Agent.

Note: whenever possible, the Debtor Agent might try to repair and re-submit the instruction. Depending on what has been agreed it may inform the Debtor about the repair with an updated FIToFIPaymentStatusReport message.

Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or

BankToCustomerAccountReport/BankToCustomerStatement message('statement')).

Scenario B:

The Debtor Agent and the Creditor Agent are not correspondents; there is an Intermediary Agent between them (so-called 3-party serial payment).

The scenario covers the case where the Intermediary Agent services an account for the Creditor Agent or the case where the Intermediary Agent and the Creditor Agent are linked through a payment clearing system.

For the case where the Creditor Agent services an account for the Intermediary Agent, the Creditor Agent will inform about the non-processability with a negative FIToFIPaymentStatusReport (status Reject) message.

Depending on whether settlement has taken place or not, the Intermediary Agent might report to the Debtor Agent with a negative FIToFIPaymentStatusReport or a PaymentReturn message.

In scope: The Debtor Agent sends the FIToFICustomerCreditTransfer message to the Intermediary Agent.

In scope: The Intermediary Agent optionally confirms the processability of the FIToFICustomerCreditTransfer by sending a positive FIToFIPaymentStatusReport message to the Debtor Agent.

In scope: The Intermediary Agent forwards the FIToFICustomerCreditTransfer message to the Creditor Agent. In Scope: The Creditor Agent sends a PaymentReturn message to inform the Intermediary Agent about the non- processability of the FIToFICustomerCreditTransfer (for example due to missing/incorrect information) including the return reason.

In scope: The Intermediary Agent optionally confirms the receipt of the PaymentReturn message by sending a positive FIToFIPaymentStatusReport message to the Creditor Agent.

Note: the Intermediary Agent might try to repair and re-submit the instruction when possible and inform the Debtor Agent with an updated FIToFIPaymentStatusReport message accordingly.

In scope: The Intermediary Agent forwards the PaymentReturn message including the return reason to the Debtor Agent to inform him about the non-processability of the FIToFICustomerCreditTransfer instruction.

In scope: The Debtor Agent optionally confirms the receipt of the PaymentReturn message by sending a positive FIToFIPaymentStatusReport message to the Intermediary Agent.

Note: the Debtor Agent might try to repair and re-submit the instruction when possible and inform the Debtor with an updated FIToFIPaymentStatusReport message accordingly.

Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or BankToCustomerAccountReport/BankToCustomerStatement message ('statement')).

Scenario C:

The Debtor Agent and the Creditor Agent are not correspondents in the currency of the transaction; there is an Instructed Reimbursement Agent between them (so-called 3-party cover payment).

For sake of simplicity, it is assumed that the Debtor Agent and the Creditor Agent have the same Reimbursement Agent.

In scope: The Debtor Agent sends the FIToFICustomerCreditTransfer message to the Creditor Agent.

In scope: The Debtor Agent sends a FinancialInstitutionCreditTransfer message to the Reimbursement Agent.

In scope: The Reimbursement Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor Agent.

In scope: The Creditor Agent cannot apply the payment instruction (for example Creditor account closed) and sends a PaymentReturn message to inform the Debtor Agent about the non-processability of the FIToFICustomerCreditTransfer instruction including the return reason.

Note: this PaymentReturn message exceptionally will not move funds, but will inform about the movement of funds (as was the case with the original FIToFICustomerCreditTransfer). The funds will be moved with the FinancialInstitutionCreditTransfer sent by the Creditor Agent as described below.

In scope: The Debtor Agent optionally confirms the receipt of the PaymentReturn message by sending a positive FIToFIPaymentStatusReport message to the Creditor Agent.

In scope: The Creditor Agent sends a FinancialInstitutionCreditTransfer message to the Reimbursement Agent.

In scope: The Reimbursement Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Creditor Agent.

Out of scope: Reporting (BankToCustomerDebitCreditNotification ('notification') and/or BankToCustomerAccountReport/ BankToCustomerStatement message ('statement')).

Note: In case the Creditor Agent is not aware that inter-bank settlement has taken place, it might send a negative FIToFIPaymentStatusReport message to the Debtor Agent. It is assumed though, that once it finds out that settlement did take place (through BankToCustomerDebitCreditNotification ('notification') and/or BankToCustomerAccountReport/ BankToCustomerStatement message ('statement') from the

Reimbursement Agent) the Creditor Agent will return the funds by sending a FinancialInstitutionCreditTransfer to the Reimbursement Agent.

6.4 FinancialInstitutionCreditTransfer *BusinessTransaction*

A FinancialInstitutionCreditTransfer message is the inter-bank movement of an amount from a party bank account (the Debtor) to a beneficiary party (the Creditor) where all parties are financial institutions.

FinancialInstitutionCreditTransfer messages result in cash transfers between Debtors and Creditors through correspondent banks or infrastructures. They may be exchanged as single instructions or grouped following certain common characteristics and, for convenience or efficiency reasons, exchanged in a batch mode. The processing of credit transfers may differ from country to country and system to system.

Depending on the scenario, there might be an Agent between the Debtor Agent and the Creditor Agent. This Agent can be an Intermediary Agent or a Reimbursement Agent. The narrative will describe more in detail the Agent role.

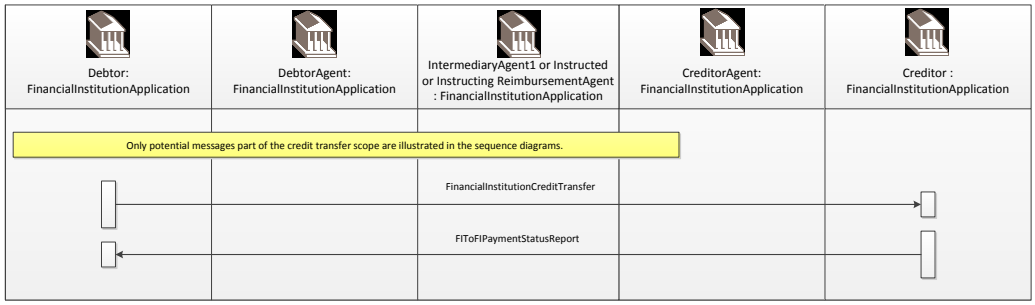
In scenarios where the receiving Agent services an account for the sending Agent, the scenario also includes the case where the sending Agent has an account with a branch/head office of the receiving Agent and will indicate that the receiving Agent can reimburse himself at this institution. The sending Agent has to be aware of an intra-group agreement allowing this.

A payment clearing and settlement system could occur between Debtor Agent and Creditor Agent (or between any other Agents). The clearing process where the Clearing Agent after being informed on the transaction prepares and sends the payment information to the Settlement Agent (if different) is out of scope and will not be described. This process includes the calculation of the settlement positions and transmission of files to the Settlement Agent. The Settlement Agent transfers the funds from the Debtor Agent to the Creditor Agent in accordance with the settlement cycle and based on the settlement report provided by the Clearing Agent.

Only potential messages for the Credit Transfer project scope are illustrated in the sequence diagrams. The original contracts between the Debtor and the Creditor (Forex, Inter-bank loans, Securities transactions,...) are out of scope and are therefore not included in the diagrams.

Scenario A:

The Debtor and the Creditor are correspondents.



The scenario covers the case where the Creditor services an account for the Debtor (i.e. is the Debtor Agent). In scope: The Debtor sends the FinancialInstitutionCreditTransfer message to the Creditor.

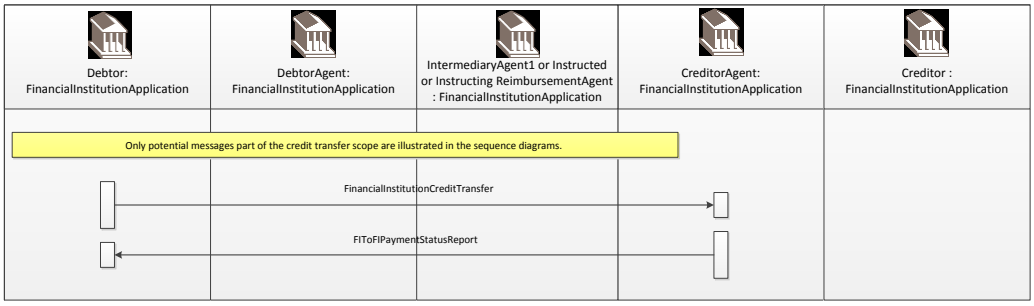
In scope: The Creditor optionally confirms the processability of the FinancialInstitutionCreditTransfer by sending a positive FIToFIPaymentStatusReport message to the Debtor.

Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or BankToCustomerAccountReport/BankToCustomerStatement message ('statement')).

Out of scope: If the Debtor services an account for the Creditor (i.e. is the Creditor Agent), then instead of sending a FinancialInstitutionCreditTransfer message, the Debtor will send a BankToCustomerDebitCreditNotification message ('notification') and/or BankToCustomerAccountReport/BankToCustomerStatement message ('statement').

Scenario B:

The Debtor and the Creditor Agent are correspondents.



The scenario covers both cases where the Debtor services an account for the Creditor Agent and where the Creditor Agent services an account for the Debtor.

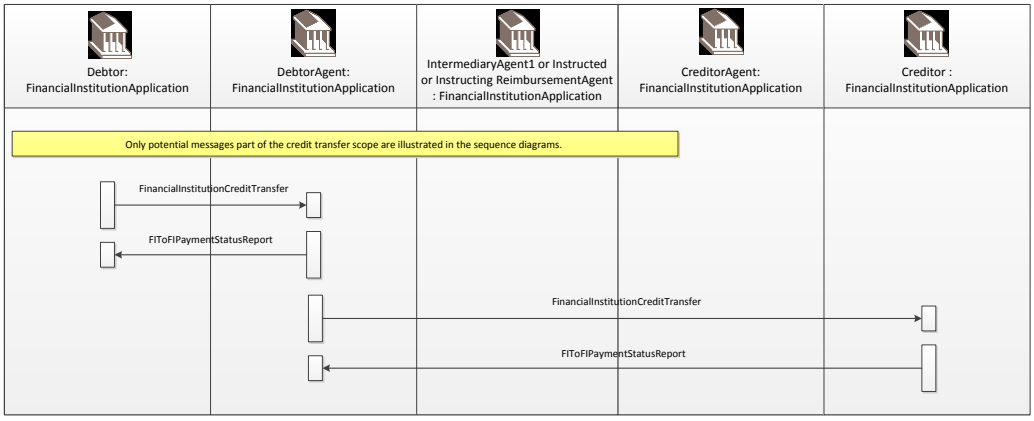
In scope: The Debtor sends the FinancialInstitutionCreditTransfer message to the Creditor Agent.

In scope: The Creditor Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer by sending a positive FIToFIPaymentStatusReport message to the Debtor.

Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or BankToCustomerAccountReport/BankToCustomerStatement message ('statement')).

Scenario C:

The Debtor Agent and the Creditor are correspondents.



The scenario covers the case where the Creditor services an account for the Debtor Agent.

In scope: The Debtor sends the FinancialInstitutionCreditTransfer message to the Debtor Agent.

In scope: The Debtor Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor.

In scope: The Debtor Agent forwards the FinancialInstitutionCreditTransfer message to the Creditor.

In scope: The Creditor optionally confirms the processability of the FinancialInstitutionCreditTransfer by sending a positive FIToFIPaymentStatusReport message to the Debtor Agent.

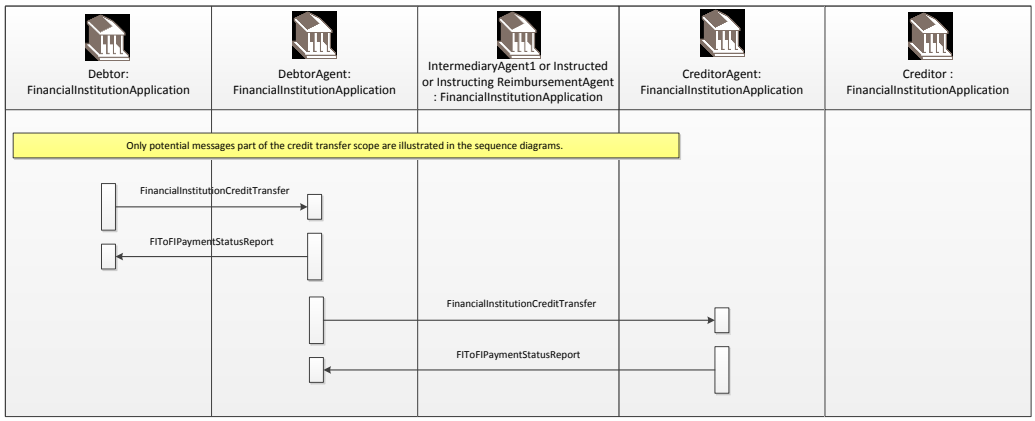
Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or

BankToCustomerAccountReport/ BankToCustomerStatement message ('statement')).

Out of scope: If the Debtor Agent services an account for the Creditor (i.e. is the Creditor Agent), then instead of sending a FinancialInstitutionCreditTransfer message, the Debtor Agent will send a BankToCustomerDebitCreditNotification message ('notification') and/or BankToCustomerAccountReport/ BankToCustomerStatement message ('statement').

Scenario D:

The Debtor Agent and the Creditor Agent are correspondents.



The scenario includes both cases where the Debtor Agent services an account for the Creditor Agent and vice versa. In scope: The Debtor sends the FinancialInstitutionCreditTransfer message to the Debtor Agent.

In scope: The Debtor Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor.

In scope: The Debtor Agent forwards the FinancialInstitutionCreditTransfer message to the Creditor Agent.

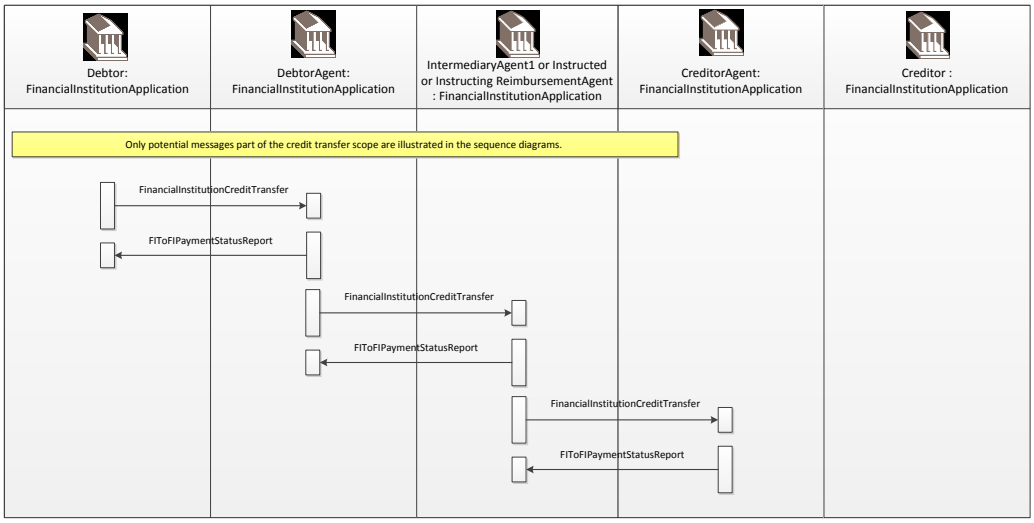
In scope: The Creditor Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor Agent.

Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or

BankToCustomerAccountReport/ BankToCustomerStatement message ('statement')).

Scenario E:

The Debtor Agent and the Creditor Agent are not correspondents: there is an Intermediary Agent between them.



For sake of simplicity only one Intermediary Agent has been illustrated. The scenario also caters for clearing payments with direct communication with the Clearing and Settlement Agent.

In scope: The Debtor sends the FinancialInstitutionCreditTransfer message to the Debtor Agent.

In scope: The Debtor Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor.

In scope: The Debtor Agent forwards the FinancialInstitutionCreditTransfer message to the Intermediary Agent. In Scope: The Intermediary Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor Agent.

In scope: The Intermediary Agent forwards the FinancialInstitutionCreditTransfer message to the Creditor Agent.

In Scope: The Creditor Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Intermediary Agent. Out of Scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or BankToCustomerAccountReport/ BankToCustomerStatement message ('statement')).

6.5 Negative FIToFIPaymentStatusReport with FinancialInstitutionCreditTransfer *BusinessTransaction*

The negative FIToFIPaymentStatusReport message is used, point to point between two parties, to report about the negative processability of an instruction, i.e. to report about the rejection of the instruction, and is used to:

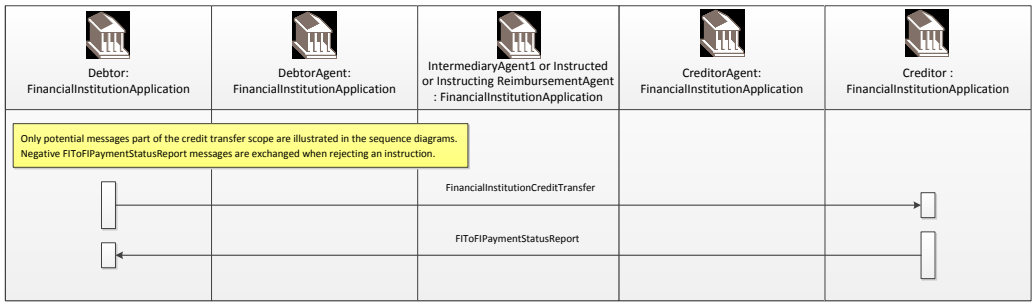
- Reject a FIToFICustomerCreditTransfer
- Reject a FinancialInstitutionCreditTransfer

The negative FIToFIPaymentStatusReport message is sent before Settlement.

After Settlement, the correct message to be used is the PaymentReturn message, the BankToCustomerDebitCreditNotification message ('notification') and/or the BankToCustomerAccountReport/ BankToCustomerStatement message ('statement'). Different options are illustrated in the Message Flow diagram.

Scenario A:

The Debtor and the Creditor are correspondents.



The scenario covers the case where the Creditor services an account for the Debtor (i.e. is the Debtor Agent).

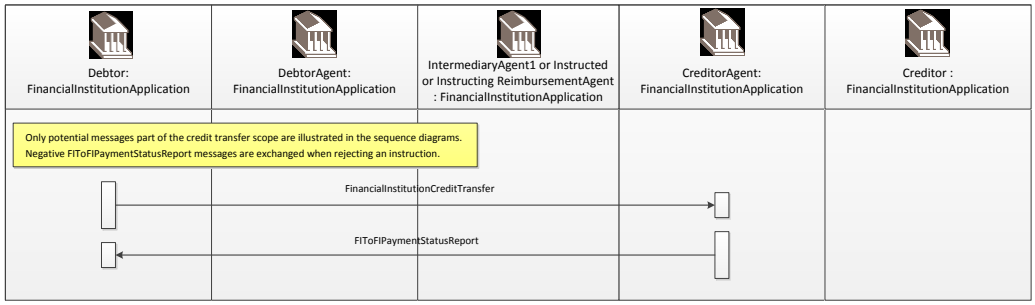
For cases where the Debtor services an account for the Creditor, or Debtor and Creditor are linked through a clearing and settlement system, the Creditor will inform about the non-processability of the instruction, by using a PaymentReturn message.

In scope: The Debtor sends the FinancialInstitutionCreditTransfer message to the Creditor.

In scope: The Creditor sends a negative FIToFIPaymentStatusReport message to inform the Debtor about the non- processability of the FinancialInstitutionCreditTransfer instruction (for example due to missing/incorrect information).

Scenario B:

The Debtor and the Creditor Agent are correspondents.



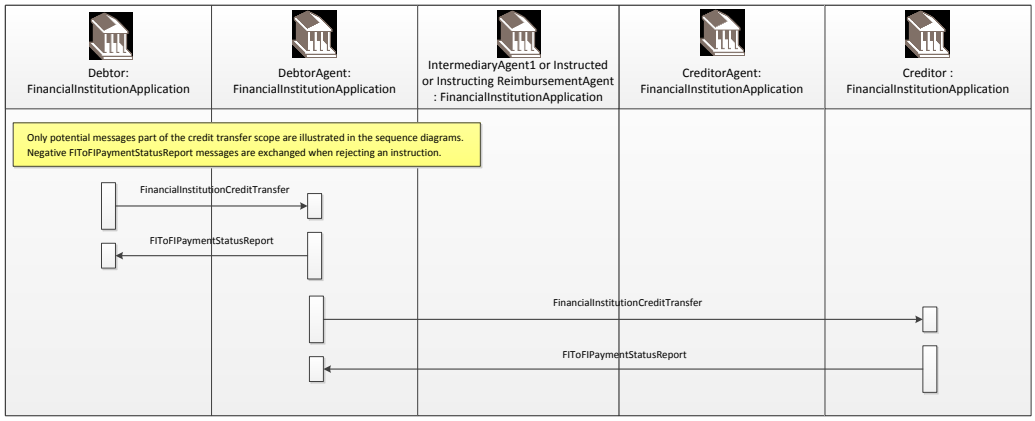
The scenario covers the case where the Creditor Agent services an account for the Debtor.

In cases where the Debtor services an account for the Creditor Agent, or Debtor and Creditor Agent are linked through a clearing and settlement system, the Creditor Agent will inform about the non-processability of the instruction by using a PaymentReturn message.

In scope: The Debtor sends the FinancialInstitutionCreditTransfer message to the Creditor Agent

In scope: The Creditor Agent sends a negative FIToFIPaymentStatusReport message to inform the Debtor about the non-processability of the FinancialInstitutionCreditTransfer instruction (for example due to missing/incorrect information).

Scenario C: The Debtor Agent and the Creditor are direct correspondents.



The scenario covers the case where the Creditor services an account for the Debtor Agent.

In cases where the Debtor Agent services an account for the Creditor, or Debtor Agent and Creditor are linked through a clearing and settlement system, the Creditor will inform about the non-processability of the instruction by using a PaymentReturn message.

In scope: The Debtor sends the FinancialInstitutionCreditTransfer message to the Debtor Agent.

In scope: The Debtor Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor.

In scope: The Debtor Agent forwards the FinancialInstitutionCreditTransfer instruction to the Creditor.

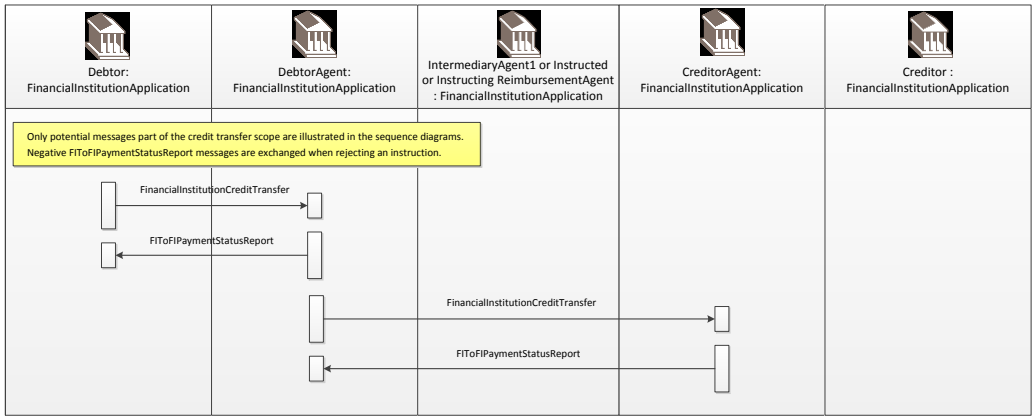
In scope: The Creditor sends a negative FIToFIPaymentStatusReport message to inform the Debtor Agent about the non-processability of the FinancialInstitutionCreditTransfer instruction.

Note: the Debtor Agent might try to correct and re-submit the instruction and inform the Debtor about this correction with an updated FIToFIPaymentStatusReport message. If the status is now positive, no further action is required but the Debtor might be informed on the positive outcome through a positive FIToFIPaymentStatusReport message.

Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or BankToCustomerAccountReport/BankToCustomerStatement message ('statement')).

Scenario D:

The Debtor Agent and the Creditor Agent are correspondents.



The scenario covers the case where the Creditor Agent services an account for the Debtor Agent.

In cases where the Debtor Agent services an account for the Creditor Agent, or Debtor Agent and Creditor Agent are linked through a clearing and settlement system, the Creditor Agent will inform on the non-processability of the instruction by using a PaymentReturn message.

In scope: The Debtor sends the FinancialInstitutionCreditTransfer message to the Debtor Agent.

In scope: The Debtor Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor.

In scope: The Debtor Agent forwards the FinancialInstitutionCreditTransfer message to the Creditor Agent.

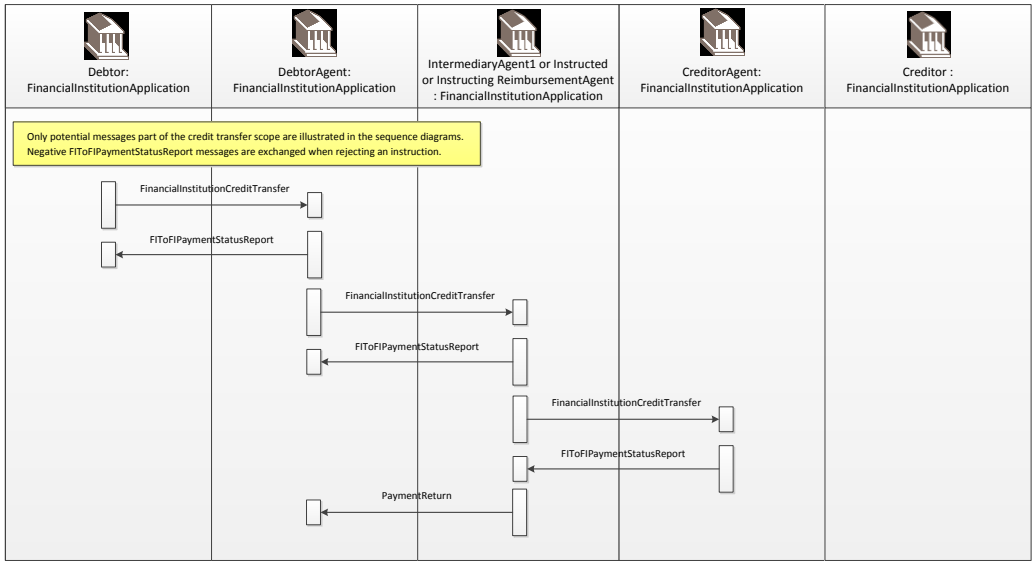
In scope: The Creditor Agent sends a negative FIToFIPaymentStatusReport message to inform the Debtor Agent about the non-processability of the FinancialInstitutionCreditTransfer instruction.

Note: the Debtor Agent might try to correct and re-submit the instruction and inform the Debtor about this correction with an updated FIToFIPaymentStatusReport message. If status is now positive no further action is required, but the Debtor might be informed on the positive outcome through a positive FIToFIPaymentStatusReport message.

Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or BankToCustomerAccountReport/BankToCustomerStatement message ('statement')).

Scenario E:

The Debtor Agent and the Creditor Agent are not correspondents.



For sake of simplicity only one Intermediary Agent has been added. The scenario covers the case where the Creditor Agent services an account for the Intermediary Agent.

In cases where the Intermediary Agent services an account for the Creditor Agent (including clearing payments where the Intermediary Agent is a central Clearing and/or Settlement Agent), the Creditor Agent will inform about the non- processability of the instruction by using a PaymentReturn message.

In scope: The Debtor sends the FinancialInstitutionCreditTransfer message to the Debtor Agent.

In scope: The Debtor Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor.

In scope: The Debtor Agent forwards the FinancialInstitutionCreditTransfer message to the Intermediary Agent.

In scope: The Intermediary Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIiPaymentStatusReport message to the Debtor Agent.

In scope: The Intermediary Agent forwards the FinancialInstitutionCreditTransfer message to the Creditor Agent.

In scope: The Creditor Agent sends a negative FIToFIPaymentStatusReport message to inform the Intermediary Agent about the non-processability of the FinancialInstitutionCreditTransfer instruction.

Note: the Intermediary Agent might try to correct and re-submit the instruction and inform the Debtor Agent about this correction with an updated FIToFIPaymentStatusReport message. If status is now positive, no further action is required, but the Debtor Agent might be informed on the positive outcome through a positive FIToFIPaymentStatusReport message.

In scope: The Intermediary Agent sends a PaymentReturn message to the Debtor Agent.

Note: the Debtor Agent might try to correct and re-submit the instruction and inform the Debtor about this correction with an updated FIToFIPaymentStatusReport message. If Status is now positive, no further action is required, but the Debtor might be informed on the positive outcome through a positive FIToFIPaymentStatusReport message.

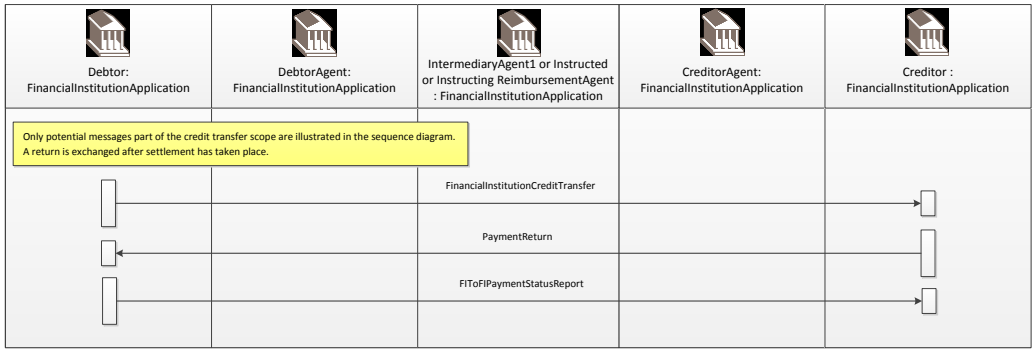
Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or BankToCustomerAccountReport/BankToCustomerStatement message ('statement').

6.6 PaymentReturn with FinancialInstitutionCreditTransfer *BusinessTransaction*

The PaymentReturn message is sent by an instructed Agent to the previous party in the payment chain when a payment cannot be executed due to an administrative reason (for example non existing/closed account) or banking reason (for example insufficient funds).

Scenario A:

The Debtor and the Creditor are direct correspondents.



The scenario covers the case where the Debtor services an account for the Creditor (i.e. is the Creditor Agent) and the case where the Debtor and the Creditor are linked through a payment clearing system.

For cases where the Creditor services an account for the Debtor, the Creditor will inform about the non-processability of the instruction by using a negative FIToFIPaymentStatusReport (status Reject) message.

In scope: The Debtor sends the FinancialInstitutionCreditTransfer message to the Creditor.

In scope: The Creditor sends a PaymentReturn message including the return reason to inform the Debtor about the non- processability of the FinancialInstitutionCreditTransfer instruction (for example due to missing/incorrect information). In scope: The Debtor optionally confirms the receipt of the PaymentReturn message by sending a positive FIToFIPaymentStatusReport message to the Creditor.

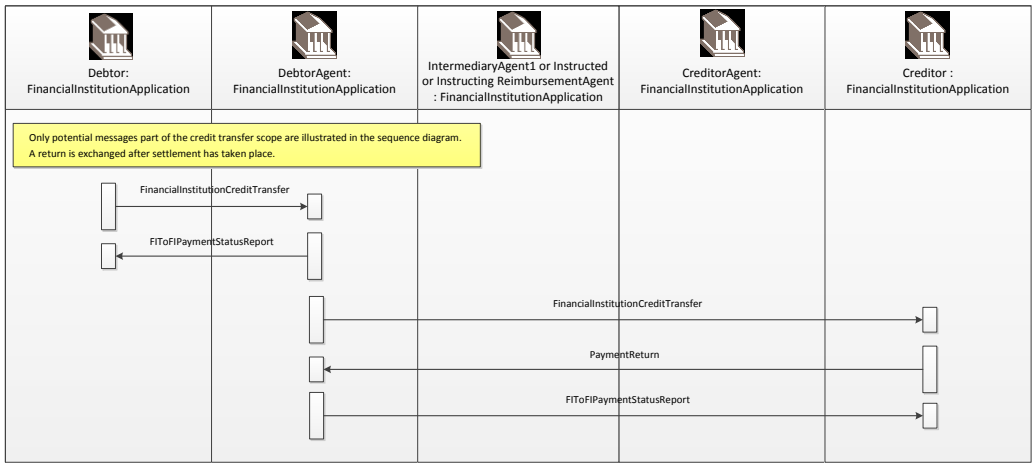
Out of scope: Reporting (BankToCustomerDebitCreditNotification ('notification') and/or BankToCustomerAccountReport/BankToCustomerStatement ('statement').

The case where the Debtor and the Creditor Agent are correspondents is very similar. Therefore, it is not illustrated. The scenario would cover the case where the Debtor services an account for the Creditor Agent and the case where the Debtor and the Creditor Agent are linked through a clearing and settlement system.

In the case where the Creditor Agent services an account for the Debtor, the Creditor Agent will inform about the non- processability of the instruction by using a negative FIToFIPaymentStatusReport message to reject the instruction.

Scenario B:

The Debtor Agent and the Creditor are correspondents.



The scenario covers the case where the Debtor Agent services an account for the Creditor and where the Debtor Agent and the Creditor are linked through a payment clearing system.

In the case where the Creditor services an account for the Debtor Agent, the Creditor will inform about the non- processability of the instruction by using a negative FIToFIPaymentStatusReport (status Reject) message.

In scope: The Debtor sends the FinancialInstitutionCreditTransfer message to the Debtor Agent.

In scope: The Debtor Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor.

In scope: The Debtor Agent forwards the FinancialInstitutionCreditTransfer message to the Creditor.

In the case where the Debtor Agent services an account for the Creditor (i.e. is also the Creditor Agent) the Debtor Agent will send a BankToCustomerDebtorCreditNotification ('notification') and/or BankToCustomerAccountReport/ BankToCustomerStatement ('statement') message instead of forwarding the FinancialInstitutionCreditTransfer message. In scope: The Creditor sends a PaymentReturn message including the return reason to inform the Debtor Agent about the non-processability of the FinancialInstitutionCreditTransfer instruction (for example due to missing/incorrect information).

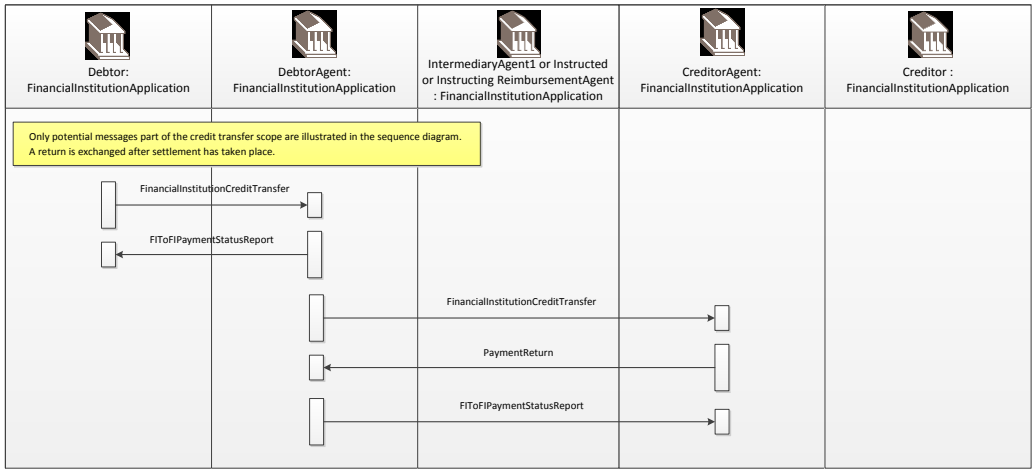
Note: whenever possible, the Debtor Agent might try to repair and re-submit the instruction. Depending on what has been agreed it may inform the Debtor of the repair with an updated FIToFIPaymentStatusReport message.

In scope: The Debtor Agent optionally confirms the receipt of the PaymentReturn message by sending a positive FIToFIPaymentStatusReport message to the Creditor.

Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or BankToCustomerAccountReport/BankToCustomerStatement message ('statement').

Scenario C:

The Debtor Agent and the Creditor Agent are correspondents.



The scenario covers the case where the Debtor Agent services an account for the Creditor Agent and where the Debtor Agent and the Creditor Agent are linked through a payment clearing system.

In the case where the Creditor Agent services an account for the Debtor Agent, the Creditor Agent will inform about the non-processability of the instruction by using a negative FIToFIPaymentStatusReport (status Reject) message.

In scope: The Debtor sends the FinancialInstitutionCreditTransfer message to the Debtor Agent.

In scope: The Debtor Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor.

In scope: The Debtor Agent forwards the FinancialInstitutionCreditTransfer message to the Creditor Agent.

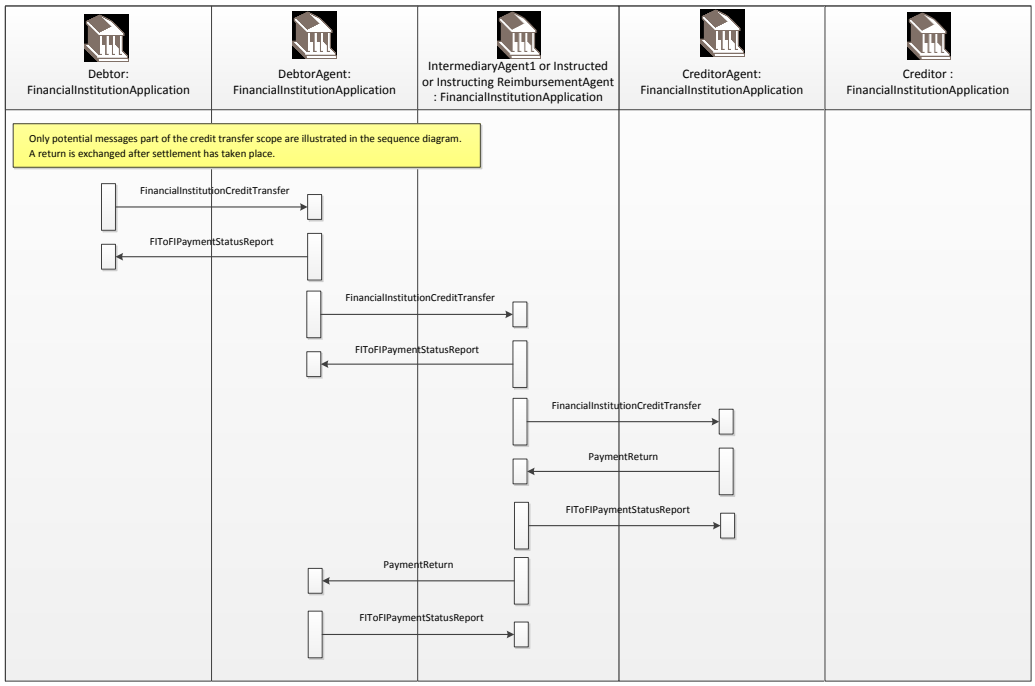
In Scope: The Creditor Agent sends a PaymentReturn message to inform the Debtor Agent about the non-processability of the FinancialInstitutionCreditTransfer instruction (for example due to missing/incorrect information).

Note: whenever possible, the Debtor Agent might try to repair and re-submit the instruction. Depending on what has been agreed it may inform the Debtor about the repair with an updated FIToFIPaymentStatusReport message.

Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or BankToCustomerAccountReport/BankToCustomerStatement message ('statement')).

Scenario D:

The Debtor Agent and the Creditor Agent are not correspondents.



For sake of simplicity, only one Intermediary Agent has been added.

The scenario covers the case where the Intermediary Agent services an account for the Creditor Agent or the case where the Intermediary Agent and the Creditor Agent are linked through a payment clearing system.

For the case where the Creditor Agent services an account for the Intermediary Agent, the Creditor Agent will inform about the non-processability of the instruction by using a negative FIToFIPaymentStatusReport (status Reject) message. In scope: The Debtor sends the FinancialInstitutionCreditTransfer message to the Debtor Agent.

In scope: The Debtor Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor.

In scope: The Debtor Agent forwards the FinancialInstitutionCreditTransfer to the Intermediary Agent.

In scope: The Intermediary Agent optionally confirms the processability of the FinancialInstitutionCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor Agent.

In scope: The Intermediary Agent forwards the FinancialInstitutionCreditTransfer instruction to the Creditor Agent. In scope: The Creditor Agent sends a PaymentReturn message including the return reason to inform the Intermediary Agent about the non-processability of the FinancialInstitutionCreditTransfer instruction (for example due to missing/ incorrect information).

Note: whenever possible, the Intermediary Agent might try to repair and re-submit the instruction. Depending on what has been agreed it may inform the Debtor Agent of the repair with an updated FIToFIPaymentStatusReport message.

In scope: The Intermediary Agent optionally confirms the receipt of the PaymentReturn message by sending a positive FIToFIPaymentStatusReport message to the Creditor Agent.

In scope: The Intermediary Agent forwards the PaymentReturn message including the return reason to the Debtor Agent to inform him about the non-processability of the FinancialInstitutionCreditTransfer instruction.

Note: whenever possible, the Debtor Agent might try to repair and re-submit the instruction. Depending on what has been agreed it may inform the Debtor about the repair with an updated FIToFIPaymentStatusReport message.

In scope: The Debtor Agent optionally confirms the receipt of the PaymentReturn message by sending a positive FIToFIPaymentStatusReport message to the Intermediary Agent.

Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or BankToCustomerAccountReport/BankToCustomerStatement ('statement').

6.7 CustomerDirectDebitInitiation and FIToFICustomerDirectDebit *BusinessTransaction*

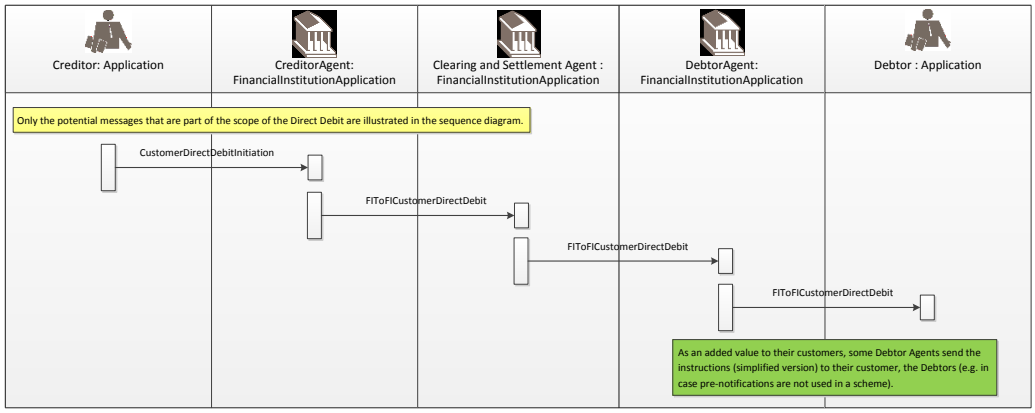
A Direct Debit is a request for payment of an amount to be collected from a party bank account (the Debtor) by an originator (the Creditor). The amounts and dates of collections may vary.

Direct Debits result in cash transfers between Debtor and Creditor through infrastructures or correspondent banks. They may be exchanged as single instructions but are traditionally grouped following some common characteristics and, for convenience or efficiency reasons, exchanged in a batch mode.

Direct Debits are processed in different ways from country to country, especially regarding the handling of the mandate (when it exists) given by the Debtor to the Creditor.

The CustomerDirectDebitInitiation message is sent by the Initiating Party (Creditor) to the Forwarding Agent or Creditor Agent. It is used to request single or bulk collection(s) of cash from one or various Debtor account(s) to a Creditor.

The FItoFICustomerDirectDebit message is sent by a Financial Institution to another Financial Institution, directly or through a Clearing System. It is used to clear Direct Debit instructions, initiated by non-financial institution customers.



The original mandate between the Debtor and the Creditor and the mandate management itself are identified as being out of scope and are therefore not included in the diagram. Some information on possible mandate management information flow is available below.

The mandate is the authorisation/expression of consent given by the Debtor, allowing a specified Creditor to originate Direct Debit instructions to debit a specified Debtor account in accordance with the relevant Direct Debit Scheme Rules and, if applicable, the mandate details.

A valid/authorised mandate represents the Debtor agreement:

- to authorise the Creditor to issue Direct Debit instruction(s) to the Debtor account, and;
- to instruct the Debtor Agent to act upon the Creditor Direct Debit instruction.

Note: in some cases, the Debtor Agent is unaware of the Mandate and simply acts upon the Direct Debit instruction. A mandate can be an electronic mandate or a mandate in paper form. In case of a paper mandate the Creditor dematerialises the mandate upon the mandate presentation in paper form.

Dematerialised mandate data are referred to as the Mandate Related Information (MRI) only and are not to be considered as the mandate document. The original mandate remains subject for archiving and reference for any legal matter.

Prior to the sending of a Direct Debit instruction, the Creditor may notify the Debtor of the amount and date on which the Direct Debit instruction will be presented to the Debtor Agent for debit. This notification may be sent together with or separately from other commercial documents (for example, an invoice).

There are two types of pre-notifications:

- Schedule of payments for a number of subsequent Direct Debits for an agreed period of time.
- Individual advises of a Direct Debit subject for collection on a specified value date only. In case of recurrent

Direct Debit this requires an update for each individual recurrent Direct Debit prior to its collection.

The Debtor will reconcile the pre-notification with the signed/authorised mandate and where relevant other records (such as account payable items, contract details or subscription agreement). The Debtor ensures the account is covered with subject amount.

In scope: The Creditor sends the CustomerDirectDebitInitiation message to its Agent (the Creditor Agent), together with the Mandate Related Information when requested by the scheme.

In scope: The Creditor Agent sends an FIToFICustomerDirectDebit message to the Clearing and Settlement Agent, in line with the clearing cycle. The Mandate Related Information (MRI) is also transported, when requested by the scheme.

In scope: The Clearing and Settlement Agent send the FIToFICustomerDirectDebit message, together with the Mandate Related Information (MRI), when requested by the scheme, to the Debtor Agent.

Out of scope: Potentially, the Debtor Agent could forward the Direct Debit instruction (simplified version) to the debtor (for example, in case pre-notifications are not used in a Scheme).

Out of scope: In case the Clearing and Settlement Agent are two parties the Clearing Agent prepares and sends the payment information for the Settlement Agent (in accordance with the agreed and published settlement cycle). The process includes the calculation of the settlement positions and transmission of the files to the Settlement Agent.

The information provided includes the net position to be debited, the party to be debited, the net position to be credited, the party to be credited and the value date.

The settlement is executed by the Settlement Agent, in accordance with the settlement cycle, based on the settlement report provided by the Clearing Agent. The Settlement Agent performs the transfer of funds from the Debtor Agent to the Creditor Agent.

Out of scope: Reporting (BankToCustomerDebitCreditNotification message ('notification') and/or BankToCustomerAccountReport/BankToCustomerStatement message ('statement')) to the Debtors and Creditors. Timing may vary depending on market practices and value added services provided by some agents that are before or after settlement.

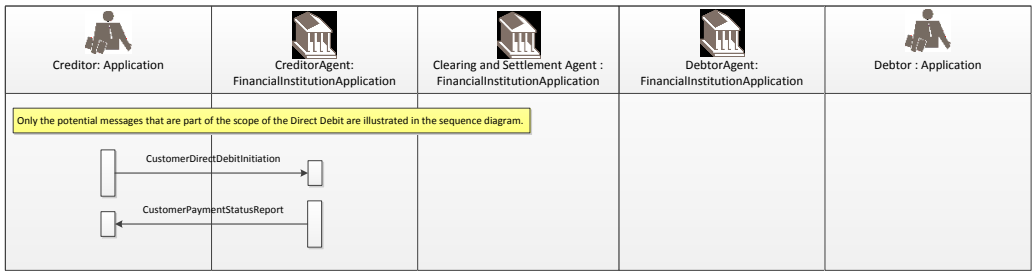
6.8 FIToFIPaymentStatusReport with DirectDebit *BusinessTransaction*

The negative FIToFIPaymentStatus Report message is sent by the receiver of an instruction to inform the sender of the instruction about the negative processability of the instruction.

The negative FIToFIPaymentStatusReport message is to be sent before settlement. Indeed, after settlement, the correct message to be used is the PaymentReturn message.

Scenario A:

A negative CustomerPaymentStatusReport message initiated by the Creditor Agent to reject a CustomerDirectDebitInitiation message.

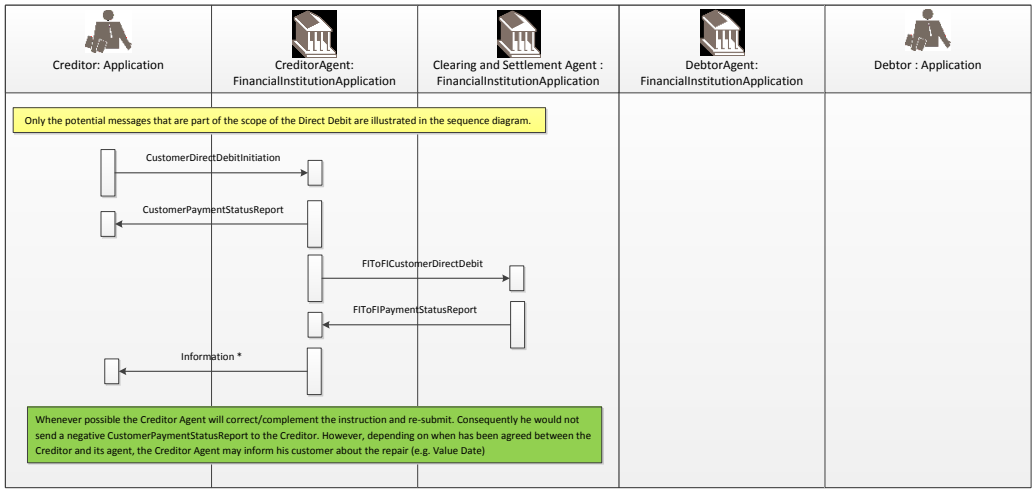


The Creditor sends the CustomerDirectDebitInitiation message to its agent (the Creditor Agent).

The Creditor Agent sends a negative CustomerPaymentStatusReport message to the Creditor to inform him about the non processability of the CustomerDirectDebitInitiation instruction, for example due to missing information.

Scenario B:

A negative FIToFIPaymentStatusReport message initiated by the Clearing and Settlement Agent *to* reject an FIToFICustomerDirectDebit message.



* Information: If the Creditor Agent books after collection (i.e. cycle is 3 days) then the CustomerPaymentStatusReport message is to be used. If the Creditor Agent books immediately and the instruction is rejected in the interbank leg, then the Creditor needs to be informed of a payment return

The Creditor sends the CustomerDirectDebitInitiation message to its agent (the Creditor Agent).

The Creditor Agent confirms the processability of the CustomerDirectDebitInitiation instruction by sending a positive CustomerPaymentStatusReport message to the Creditor.

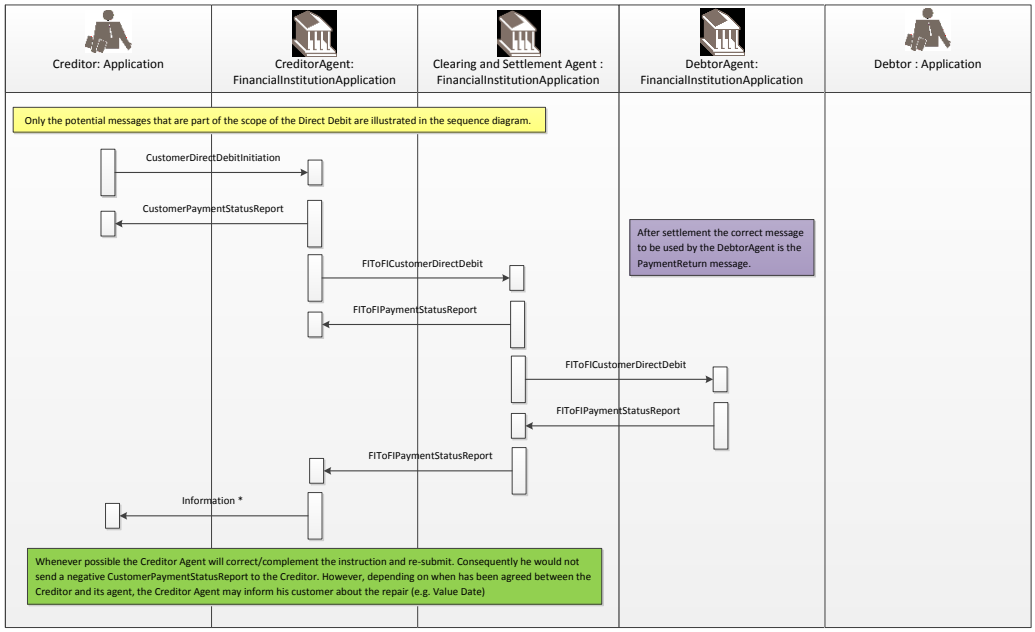
The Creditor Agent sends an FIToFICustomerDirectDebit message to the Clearing and Settlement Agent, in line with the clearing cycle. The Mandate Related Information (MRI) is also transported, when applicable.

If information is missing and inter-bank settlement has not taken place yet, the Clearing and Settlement Agent informs the Creditor Agent about the non processability of the FIToFICustomerDirectDebit instruction. The Creditor Agent may inform his customer, the Creditor, about the negative processing of the CustomerDirectDebitInitiation instruction by using a negative CustomerPaymentStatusReport message, a BankToCustomerDebitCreditNotification message ('notification') or through a BankToCustomerAccountReport/BankToCustomerStatement message ('statement').

Note: Before sending a negative CustomerPaymentStatusReport message to its customer, it is assumed that the Creditor Agent will try to correct the CustomerDirectDebitInitiation message information and re-submit an FIToFICustomerDirectDebit message to the Clearing and Settlement Agent. In this case the Creditor will not be involved.

Scenario C:

Negative FIToFIPaymentStatusReport message initiated by the Debtor Agent to Reject the FIToFICustomerDirectDebit message.



* Information: If the Creditor Agent books after collection (i.e. cycle is 3 days) then the CustomerPaymentStatusReport message is to be used. If the Creditor Agent books immediately and the instruction is rejected in the interbank leg, then the Creditor needs to be informed of a payment return.

The Creditor sends a CustomerDirectDebitInitiation message to its Agent (the Creditor Agent).

The Creditor Agent confirms the processability of the CustomerDirectDebitInitiation instruction by sending a CustomerPaymentStatusReport message to the Creditor.

The Creditor Agent sends an FIToFICustomerDirectDebit message to the Clearing and Settlement Agent, in line with the clearing cycle. The Mandate Related Information (MRI) is also transported, when applicable.

The Clearing and Settlement Agent confirms the processability of the FIToFICustomerDirectDebit instruction by sending an FIToFIPaymentStatusReport message to the Creditor Agent.

The Clearing and Settlement Agent sends an FIToFICustomerDirectDebit message, together with potentially the

Mandate Related Reference (MRI) to the Debtor Agent immediately for information purposes only.

If settlement has not yet taken place, the Debtor Agent may send a negative FIToFIPaymentStatusReport message to the Clearing and Settlement Agent, to inform him about the rejection of the FIToFICustomerDirectDebit instruction. This negative FIToFIPaymentStatusReport message may subsequently be forwarded to the Creditor Agent. The Creditor Agent may inform his customer, the Creditor, about the negative processing of the CustomerDirectDebitInitiation instruction by using a CustomerPaymentStatusReport message, a BankToCustomerDebitCreditNotification message ('notification') or through a BankToCustomerAccountReport/ BankToCustomerStatement message ('statement').

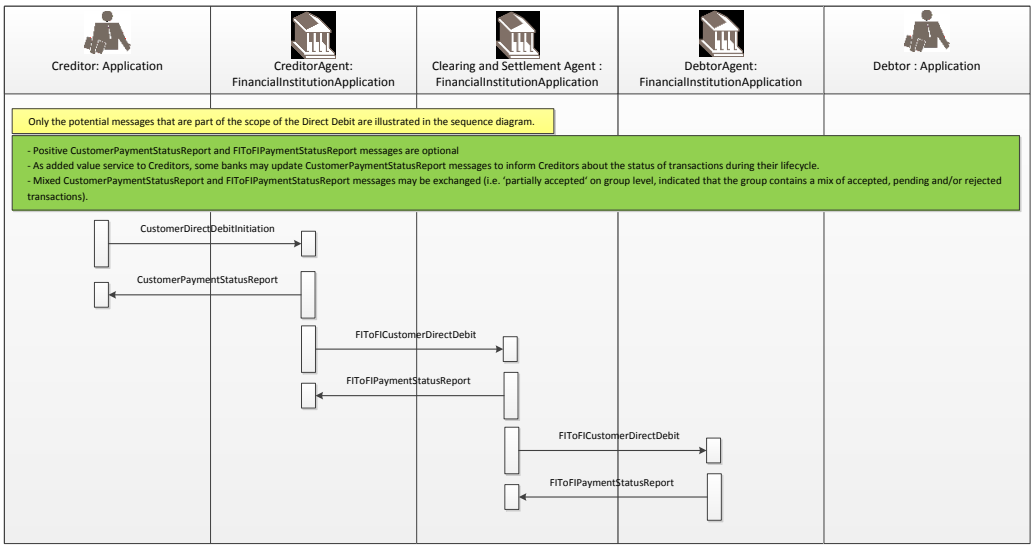
6.9 Positive FIToFIPaymentStatusReport with DirectDebit *BusinessTransaction*

The positive FIToFIPaymentStatusReport message is sent by the receiver of an instruction to inform the receiver that the instruction received (either single or grouped) is processable.

A positive FIToFIPaymentStatusReport message can also be used to confirm the processability of a PaymentReturn message or an FIToFIPaymentReversal message.

The positive FIToFIPaymentStatus Report message is also meant to be generic to ensure re-usability with other Payments Instruments.

The FIToFIPayment Status Report messages are exchanged, point to point between two parties, optionally and as per bilateral agreements and may be complemented by an BankToCustomerDebitCreditNotification message ('notification') and/or BankToCustomerAccountReport/BankToCustomerStatement message ('statement').



Scenario: Use of the CustomerPaymentStatusReport message and FIToFIPaymentStatusReport to confirm the processability of a CustomerDirectDebitInitiation instruction, followed by a FIToFICustomerDirectDebit message.

In scope: The Creditor sends the CustomerDirectDebitInitiation message to its agent (the Creditor Agent).

In scope: The Creditor Agent confirms the processability of the CustomerDirectDebitInitiation instruction by sending a CustomerPaymentStatusReport message to the Creditor.

In scope: The Creditor Agent sends an FIToFICustomerDirectDebit message to the Clearing and Settlement Agent, in line with the clearing cycle. The Mandate Related Information (MRI) is also transported, when applicable.

In scope: The Clearing and Settlement Agent confirms the processability of the FIToFICustomerDirectDebit instruction by sending a positive FIToFIPaymentStatusReport message to the Creditor Agent.

In scope: The Clearing and Settlement Agent sends an FIToFICustomerDirectDebit message, together with potentially the Mandate Related Information (MRI) to the Debtor Agent immediately for information purposes only.

In scope: The Debtor Agent sends a positive FItoFIPaymentStatusReport message to the Clearing and Settlement Agent. This positive status message may subsequently be forwarded to the Creditor Agent.

6.10 Payment Return with DirectDebit *BusinessTransaction*

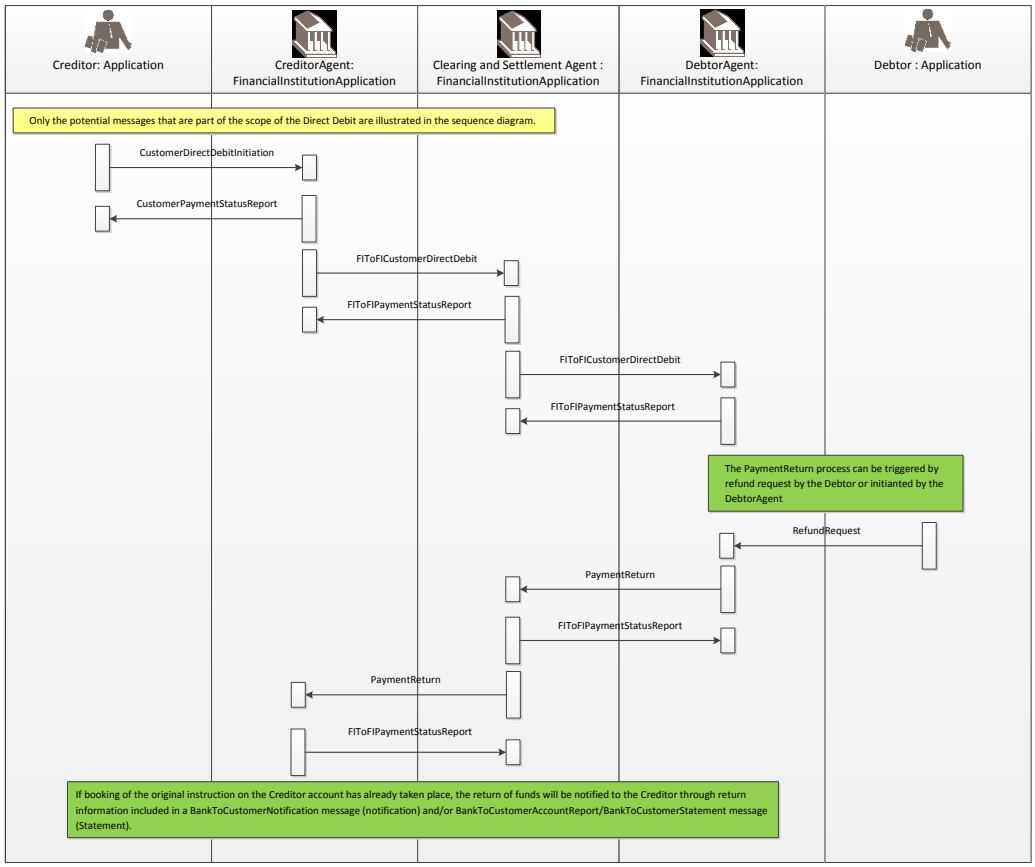
A PaymentReturn message is initiated by the Debtor Agent and sent to the previous party in the payment chain when a debit cannot be executed due to an administrative reason (for example non existing/closed account) or due to a banking reason (for example insufficient funds).

The PaymentReturn message is also the message to be used by the Debtor Agent following the receipt of a refund request by the Debtor (out of scope) as it is assumed that the refund request will be done through a non-automated tool (for example phone/fax) and is not part of the scope.

In this case, the PaymentReturn message will contain a code to indicate that it is triggered by a request for refund by the Debtor.

Scenario A:

PaymentReturn message initiated by the Debtor Agent.



The Creditor sends the CustomerDirectDebitInitiation message to its agent (the Creditor Agent).

The Creditor Agent confirms the processability of the CustomerDirectDebitInitiation instruction by sending a positive CustomerPaymentStatusReport to the Creditor.

The Creditor Agent sends an FIToFICustomerDirectDebit message to the Clearing and Settlement Agent, in line with the clearing cycle. The Mandate Related Information (MRI) is also transported, when applicable.

The Clearing and Settlement Agent confirms the processability of the FIToFICustomerDirectDebit instruction by sending a positive FIToFIPaymentStatusReport message to the Creditor Agent.

The Clearing and Settlement Agent sends an FIToFICustomerDirectDebit message, together with potentially the

Mandate Related Reference (MRI) to the Debtor Agent immediately for information purposes only.

The Debtor Agent sends a positive FIToFIPaymentStatusReport message to the Clearing and Settlement Agent.

If the Debtor Agent is unable to make the collection from the Debtor Account for one or several reasons (insufficient funds, customer deceased...), It will initiate a PaymentReturn message, and route it through the Clearing and Settlement Agent to the Creditor Agent, giving the reason for the Return.

The Clearing and Settlement Agent optionally confirms the receipt of the PaymentReturn message by sending a positive FIToFIPaymentStatusReport message to the Debtor Agent.

The Clearing and Settlement Agent forwards the PaymentReturn message to the Creditor Agent.

In case the Clearing and Settlement Agent are two parties the Clearing Agent prepares the (returned) payment information for the Settlement Agent (the net position to be debited, the party to be debited, the net position to be credited, the party to be credited and the value date) in accordance with the agreed and published settlement cycle. The Settlement Agent performs the transfer of cash from the credit party to the debit party (in accordance with the agreed published settlement cycle). (Out of scope and not illustrated).

The Creditor Agent will optionally confirm receipt of the PaymentReturn message to the Clearing Agent. Depending on agreements between the Creditor and the Creditor Agent, the Creditor may be informed either through a negative CustomerPaymentStatusReport message, or through a BankToCustomerDebitCreditNotification message ('notification') and/or BankToCustomerAccountReport/BankToCustomerStatement message ('statement') about the funds return and thus the debit on his account.

Scenario B: Refund by the Debtor (Not illustrated in the Sequence Diagram).

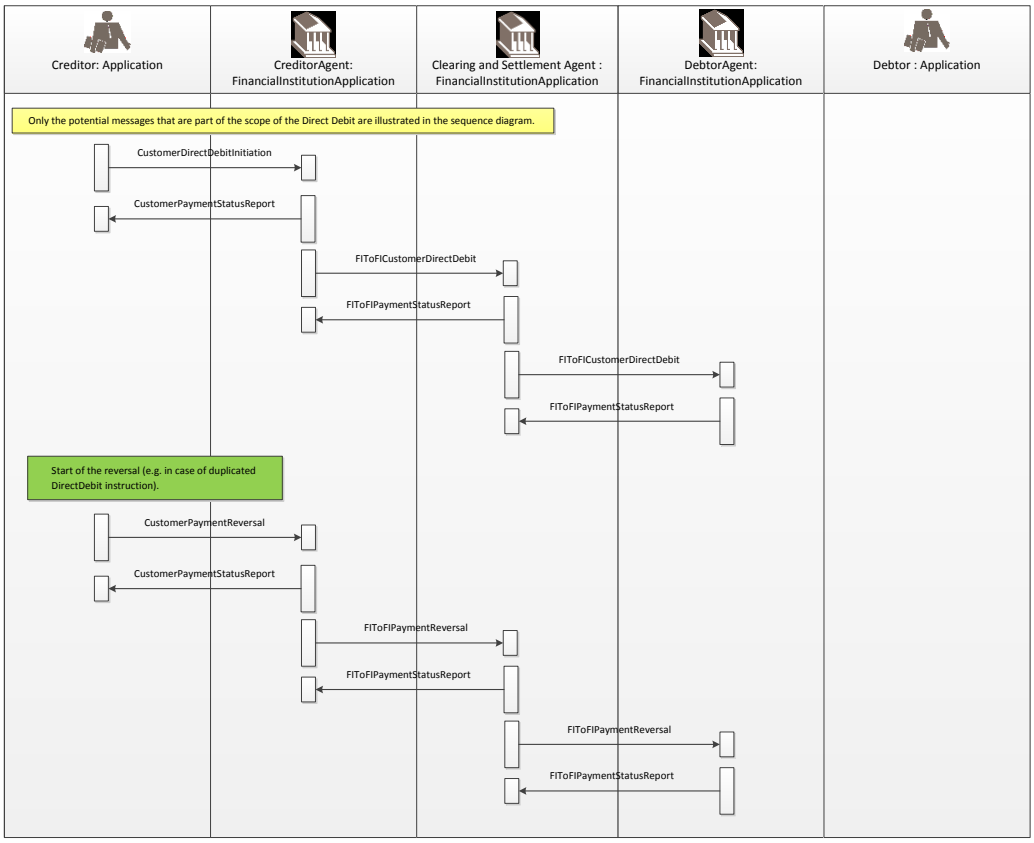
This scenario is similar to the previous scenario, except that the PaymentReturn instruction by the Debtor Agent to the Clearing and Settlement Agent is triggered by a Refund Request by the Debtor to his agent, the Debtor Agent (in a non- automated manner). In this case, the PaymentReturn message will contain a code indicating that it was triggered by a request for refund by the Debtor.

6.11 FIToFIPayment Reversal with DirectDebit *BusinessTransaction*

The Creditor will initiate a CustomerPaymentReversal message, after Settlement, when a paid Direct Debit should not have been processed.

The Creditor Agent will in his turn initiate an FIToFIPaymentReversal for the next agent in the payment chain. Consequently, the Debtor will be credited back.

Note: The Creditor Agent may be the originator of a payment reversal - it will in this case initiate an FIToFIPaymentReversal message.



The Creditor sends a CustomerDirectDebitInitiation message to its Agent (the Creditor Agent).

The Creditor Agent confirms the processability of the CustomerDirectDebitInitiation instruction by sending a positive CustomerPaymentStatusReport message to the Creditor.

The Creditor Agent sends an FIToFICustomerDirectDebit message to the Clearing and Settlement Agent, in line with the clearing cycle. The Mandate Related Information (MRI) is also transported, when applicable.

The Clearing and Settlement Agent confirms the processability of the FIToFICustomerDirectDebit instruction by sending a positive FIToFIPaymentStatusReport message to the Creditor Agent.

The Clearing and Settlement Agent sends an FIToFICustomerDirectDebit message, together with potentially the Mandate Related Reference (MRI) to the Debtor Agent immediately for information purposes only.

The Debtor Agent sends a positive FIToFIPaymentStatusReport message to the Clearing and Settlement Agent. The Creditor realizes this was a duplicated CustomerDirectDebitInitiation instruction. It now wants to send a CustomerPaymentReversal message. It identifies the original CustomerDirectDebitInitiation message (or a file of direct debit instructions) and generates an offsetting transaction in favour of the Debtor, under the quotation of the reversal reasons. The Creditor Agent may confirm the receipt of the CustomerPaymentReversal message by sending a positive CustomerPaymentStatusReport message to the Creditor.

An FIToFIPaymentReversal message is submitted by the Creditor Agent to the Clearing and Settlement Agent for settlement, under quotation of the original direct debit reference and the reason for the reversal.

The Clearing Agent confirms the processability of the reversal by sending a positive FItoFIPaymentStatusReport message to the Creditor Agent.

The Clearing and Settlement Agent forwards the FIToFIPaymentReversal message to the Debtor Agent immediately for information purposes only.

In case the Clearing and Settlement Agent are two parties the Clearing Agent prepares the payment information for the Settlement Agent (in accordance with the agreed and published settlement cycle). That process includes the calculation of the settlement positions.

The information provided to the Settlement Agent is the net position to be debited, the party to be debited, the net position to the credited, the party to be credited and the value date (Out of Scope).

The Settlement Agent performs the transfer of funds from the Credit Party to the Debit Party (in accordance with the agreed and published settlement cycle) (Out of Scope)

A positive FIToFIPaymentStatusReport message can optionally be initiated by the Debtor Agent and sent to the Clearing and Settlement Agent to confirm the processability of the reversal message.

Note: it may exceptionally occur that a PaymentReturn message and an FIToFIPaymentReversal message would cross each other, but this could only be avoided through value-added monitoring services that could be offered by the scheme manager and/or might provoke exceptions/investigation handling.

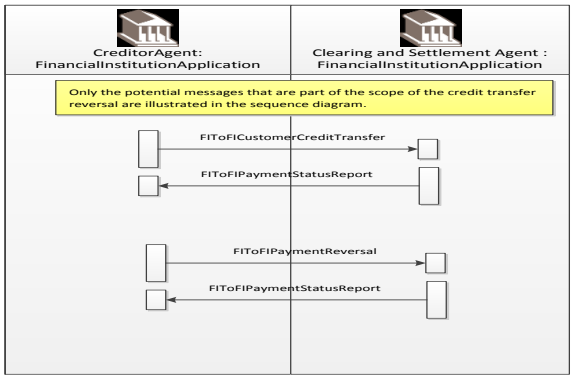
6.12 FIToFIPayment Reversal with CreditTransfer *BusinessTransaction*

The DebtorAgent may initiate an FIToFIPaymentReversal as a mechanisam to reverse a wrongly sent FIToFICustomerCreditTransfer message, under the following conditions:

- It is a "mass"-procedure, not a procedure for single transactions
- It applies only to the correction of technical errors made by banks (DebtorAgent or possibly its direct participant in the ACH)
- The type of errors is strictly limited to :
  - Duplicate sending
  - Technical problem resulting in erroneous CreditorAgent identification, Creditor identification or amounts
- The amount of the reversal transaction is strictly identical to the amount of the original transaction.
- The consent of the Creditor is required before the CreditorAgent may debit the account of its customer. This consent shall be given either on a case by case basis or in a comprehensive manner in the form of a contractual agreement between the customer and his agent.

The CreditorAgent of the original payment may refuse the reversal debit and consequently reject the reversal transaction for:

- - Banking reasons, such as account closed or blocked, Customer deceased, Insufficient funds on the account or because the Beneficiary has not given his consent to the transaction,
- - Technical reasons, e.g. because the BIC or IBAN communicated in the Reversal instruction is not correct, or the original SCT has never been received or has already been returned.



The Debtor Agent sends an FIToFICustomerCreditTransfer message to the Clearing and Settlement Agent, in line with the clearing cycle.

The Clearing and Settlement Agent confirms the processability of the FIToFICustomerCreditTransfer instruction by sending a positive FIToFIPaymentStatusReport message to the Debtor Agent.

The Clearing and Settlement Agent sends a FIToFICustomerCreditTransfer message, to the Creditor Agent immediately for information purposes only.

The Creditor Agent sends a positive FIToFIPaymentStatusReport message to the Clearing and Settlement Agent.

The Debtor Agent identifies there was a technical error (duplicate or erroneous processing information) in the FIToFICustomerCreditTransfer instruction and wants to reverse the error through the sending of a FIToFIPaymentReversal message. It retrieves the information from the original FIToFICustomerCreditTransfer message (that is the file of the credit transfer instructions) and generates an offsetting transaction to debit the Creditor Agent, under the quotation of the reversal reasons.

The FIToFIPaymentReversal message is submitted by the Debtor Agent to the Clearing and Settlement Agent for settlement, under quotation of the original FIToFICustomerCreditTransfer and the reason for the reversal. The Clearing Agent confirms the processability of the reversal by sending a positive FItoFIPaymentStatusReport message to the Debtor Agent.

The Clearing and Settlement Agent forwards the FIToFIPaymentReversal message to the Creditor Agent immediately for information purposes only.

In case the Clearing and Settlement Agent are two parties the Clearing Agent prepares the payment information for the Settlement Agent (in accordance with the agreed and published settlement cycle). That process includes the calculation of the settlement positions.

The information provided to the Settlement Agent is the net position to be debited, the party to be debited, the net position to the credited, the party to be credited and the value date (Out of Scope).

The Settlement Agent performs the transfer of funds from the Creditor Party to the Debtor Party (in accordance with the agreed and published settlement cycle) (Out of Scope)

A positive FIToFIPaymentStatusReport message can optionally be initiated by the Creidtor Agent and sent to the Clearing and Settlement Agent to confirm the processability of the reversal message.

Note: it may exceptionally occur that a PaymentReturn message and an FIToFIPaymentReversal message would cross each other, but this could only be avoided through value-added monitoring services that could be offered by the scheme manager and/or might provoke exceptions/investigation handling.

7. Business examples

7.1 FIToFIPaymentsStatusReport - *Business Example*

Narrative

On 28 June 2012, ABABUS23 received an FIToFICustomerDirectDebit message from AAAAUS29. On 29 June 2012, ABABUS23 rejects the FIToFICustomerDirectDebit message by sending an FIToFIPaymentStatusReport message to AAAAUS29, referring to the original instruction and indicating the reason for the rejection.

Notes :

1. the FIToFICustomerDirectDebit instruction from AAAAUS29 to ABABUS23 is included in the business example section of the FIToFICustomerDirectDebit message.

2. as AAAUS29 has not yet credited the account of its customer, Virgay, in its turn, AAAAUS29 will send a CustomerPaymentStatusReport to inform Virgay of the rejection. This example is included in the business example section of the PaymentStatusReport message in the Payments Initiation Message Reference Guide.

7.2 FIToFICustomerDirectDebit - *Business Example*

Narrative

On 28 June 2012, following the receipt of a CustomerDirectDebitInitiation message from its customer Virgay, AAAAUS29 in its turn sends an FIToFICustomerDirectDebit message to ABABUS23, the common correspondent for AAAAUS29 and BBBBUS39, the agent of debtor Jones.

AAAAUS29 instructs ABABUS23, under Service Level CTRV - 356, to collect USD 1025 from account 123456, owned by Jones, the debtor, and serviced by BBBBUS39. The mandate related information is also provided: the mandate reference is VIRGAY123 and the mandate was signed by Jones on 13 July 2008. The last collection is due to take place on 13 July 2015. The payment is for life insurance. The requested collection date is 13 July 20102 and charges related to the handling of the instruction are shared between the creditor and the debtor.

Note: the CustomerDirectDebitInitiation instruction sent by Virgay to AAAAUS29 is documented in the business example section of the CustomerDirectDebitInitiation message in the Payments Initiation Message Reference Guide.

7.3 PaymentReturn- Business Example 1

Narrative – Step 1

On receipt of an FIToFIPaymentCancellationRequest message from BBBB Bank, CCCC Bank checks with Seed Inc. whether it is willing to return the credited funds. Seed Inc. accepts to return the amount credited onto its account (EUR 74850) without requesting compensation. CCCC Bank sends a PaymentReturn message to BBBB Bank.

Business Description

PaymentReturn from CCCC Bank to BBBB Bank:

7.4 PaymentReturn- Business Example 2

Narrative – Step 1

On 28 June 2012, upon receipt of a Direct Debit instruction received from ABABUS23 for the collection of USD 1025, and after having checked the instruction, BBBBUS39 realises that the account specified for Debtor Jones does not allow Direct Debits. BBBBUS39 therefore decides to send a PaymentReturn message to ABABUS23, specifying the reason, and taking charges for USD 50.

Narrative – Step 2

On 29 June 2012, upon receipt of a PaymentReturn message from BBBBUS39, ABABUS23 forwards the PaymentReturn instruction to AAAAUS29, the account servicer for creditor Virgay. It forwards the reason for the return and takes USD 35 for charges. Virgay will be informed about the debit on its account through its statement.

Business Description

7.5 FIToFIPaymentReversal- *Business Example*

Narrative

On 6 July 2012, AAAAUS29 finds out that the FIToFICustomerDirectDebit message it sent to ABABUS23 on 28 June 2012, for the collection of USD 1025 from Debtor Jones, was a duplicated payment instruction. As the requested collection date was 13 July 2012, AAAAUS29 decides to send an FIToFIPaymentReversal message to its correspondent ABABUS23, giving the reason for the reversal.

Any potential charges related to the reversal will be settled outside of the message (i.e. as part of the monthly billing process).

Note : the FIToFICustomerDirectDebit instruction from AAAAUS29 to ABABUS23 is included in the business example section of the FIToFICustomerDirectDebit message.

7.6 FIToFICustomerCreditTransfer- *Business Example 1*

Narrative – Step 1

BBBB Bank, New York, has received a payment initiation from its client ABC Corporation, New York, that holds an account 00125574999 with them for payment of the following invoices:

1. An invoice with number 4562, dated 08 September 2012 from DEF Electronics, London: 10 million JPY needs to be paid to DEF Electronics account 23683707994215 with AAAA Bank, London (AAAAGB2L). ABC Corporation assigns reference ABC/4562/2012-09-08 to the payment. Payment transaction charges are shared between ABC Corporation and DEF Electronics.

2. An invoice with number ABC-13679, dated 15 September 2012 from GHI Semiconductors, Brussels: 500,000 EUR needs to be paid to GHI Semiconductors account BE30001216371411 with DDDD Bank, Belgium (DDDDBEBB). ABC Corporation assigns reference ABC/ABC-13679/2012-09-15 to the payment. The accounts receivable department of GHI Semiconductors needs to be advised when the funds have been credited to the account on telephone number +32/2/2222222. GHI Semiconductors will bear all payment transaction charges.

3. An invoice with number 987-AC, dated 27 September 2012 from their branch ABC Corporation, California: 1 million USD needs to be paid on the branch account 4895623 with BBBB Bank, San Francisco (BBBBUS66). ABC assigns reference ABC/987-AC/2012-09-27 to the payment. Payment transaction charges are shared.

Notes:

1. ABC Corporation sent a CustomerCreditTransferInitiation message containing the 3 transactions to BBBB Bank. This is illustrated in the CustomerCreditTransferInitiation business example section of the Payments Initiation Message Reference Guide.

To process the three payment instructions, BBBB Bank sends three FIToFICustomerCreditTransfer messages:

1. A first message to AAAA Bank, London (AAAAGB2L). As the banks do not have a JPY account relationship, the payment is processed using the cover method. The JPY correspondent of BBBB Bank is CCCC Bank, Tokio (CCCCJPJT). The JPY correspondent of AAAA Bank, London is AAAA Bank, Tokyo (AAAAJPJT). For the reimbursement instruction sent by BBBB Bank to its JPY correspondent CCCC Bank, please refer to the FinancialInstitutionCreditTransfer business example 1.

2. A second message to its EUR correspondent EEEE Bank, Frankfurt (EEEEDEFF) where BBBB Bank has multiple accounts, for payment to DDDDBEBB. BBBB Bank specifies that account 29314569847 should be used for reimbursement.

BBBB Bank has also received a payment order from their client Mr. Jones requesting to pay a 5 thousand EUR insurance premium by 30 September 2006 for contract ZZ/JO/164794 to ZZ Insurances, Frankfurt on their account DE89370400440532013000 with EEEEDEFF. Charges will be shared between the parties. BBBB Bank decides to include the latter 2 transactions in one FIToFICustomerCreditTransfer message.

3. A third message is send to its branch BBBB Bank, San Francisco and instructs its branch to credit the account of

ABC Corporation California in their books, account number 4895623.

```

Narrative – Step 2

On receipt of the message of BBBB Bank, EEEE Bank debits the account of BBBB Bank and credits its customer ZZ Insurances as instructed in the second payment transaction. EEEE Bank creates a new FIToFICustomerCreditTransfer to execute the first payment transaction and sends it to Creditor Agent DDDDBEBB through the clearing system XYZ of which both banks are members.

7.7 FIToFICustomerCreditTransfer- *Business Example 2*

Narrative – Step 1

Biogenetics-Crops, Glasgow, subsidiary of Biogenetics HQ, London, has received an invoice with number SX-25T, dated 13 October 2010 from Seed Inc., Dublin: 75 thousand EUR needs to be paid to the account of Seed Inc. IE29CCCC93115212345678 held at CCCC Bank, Dublin (CCCCIE2D). Transaction charges for the payment are shared between Biogenetics and Seed Inc.

The payment of all Biogenetics invoices is centralized at Biogenetics HQ. It assigns reference CROPS/SX-25T/

2012-10-13 to the payment order and passes it on to AAAA Bank (AAAAGB2L) where it holds the account

46373892034012. AAAA Bank sends the payment to its correspondent BBBB Bank in Dublin (BBBBIE2D).

7.8 FinancialInstitutionCreditTransfer- *Business Example 1*

Narrative – Step 1

Under business example 1 of the FIToFICustomerCreditTransfer, BBBB Bank, New York (BBBBUS33) sent an FIToFICustomerCreditTransfer message to AAAA Bank (AAAAGB2L) using the cover method as BBBB Bank does not have a JPY account relationship with AAAA Bank. BBBB Bank uses CCCC Bank, Tokyo as its correspondent. AAAA Bank uses AAAA Bank, Tokyo (AAAAJPJT) as its JPY correspondent. Immediately after sending the FIToFICustomerCreditTransfer to AAAA Bank, BBBB Bank sends its correspondent CCCC Bank a FinancialInstitutionCreditTransfer message to cover the customer payment.

7.9 FinancialInstitutionCreditTransfer- *Business Example 2*

Narrative – Step 1

On 20 October 2012, AAAAFRPP agrees on a foreign exchange deal with BBBBITTT: 100 million SEK is sold against 10,621,575.00 EUR (exchange rate 9.4148). The deal is confirmed with common reference BBBBTT4148AAAAPP.

On the same day AAAAFRPP sends a FinancialInstitutionCreditTransfer message to its SEK correspondent CCCCSESS. They instruct CCCCSESS to debit their account 123456789 with value date 22 October 2012 to pay 100 million SEK to BBBBITTT.

BBBBITTT has communicated the following settlement instructions: the SEK amount is to be credited to the SEK sub- account of their account 995566ZZ876 with DDDDLULL. DDDDLULL owns a SEK account 24538877443 with

FFFF Bank (FFFFSESS).
